Ventilation and air conditioning - Part 7: Ventilation systems in laboratories

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	5
4	Tasks of the HVAC system	8
5	Planning and design of HVAC systems	9
5.1	General	9
5.2	Planning criteria	9
5.3	Air volume flow rates	10
5.3.1	General	10
5.3.2	Supply air volume flow rates for all rooms as in 5.3.3 to 5.3.8	10
5.3.3	Extract air volume flow for laboratory rooms	10
5.3.4	Extract air volume flow rates for solvent storage rooms	11
5.3.5	Extract air volume flow for chemicals storage rooms	11
5.3.6	Extract air volume flow for rooms for pressurized gas cylinder storage	11
5.3.7	Extract air volume flow for temperature-controlled rooms	11
5.3.8	Extract air volume flow for storage of cryogenic gases	12
5.4	Fume cupboards	12
5.5	Other extract air equipment	12
5.6	Air flows within the room	13
5.7	Quality of room air	13
6	Supply air and extract air systems	13
6.1	General	13
6.2	Supply air system	13
6.3	Extract air system	14
6.3.1	Air routing	14
6.3.2	Retention and filter systems	14
6.3.3	Maintenance and repair	14
6.3.4	Explosion protection	14
7	Sound pressure level	15
8	Special requirements for HVAC systems in microbiology laboratories	15
9	Labelling	15
