

ISO 9845-1:1992-10 (E)

Solar energy; reference solar spectral irradiance at the ground at different receiving conditions; part 1: direct normal and hemispherical solar irradiance for air mass 1,5

Contents	Page
1 Scope	1
2 Definitions	1
3 Application of the spectral data for deriving effective solar irradiances and solar spectrum weighted quantities	2
4 Validation of accuracy	2
5 Standard data of direct normal solar irradiance, hemispherical solar irradiance on an equator-facing, 3r tilted plane and normalized hemispherical solar irradiance	3
Annexes	
A Atmospheric parameters of the model atmosphere	10
B Computational technique for tabulated values derived from the spectral irradiance	11
C Plots of solar irradiance	12
D Bibliography	14
