DIN EN 12977-4:2012-06 (E)

Thermal solar systems and components - Custom built systems - Part 4: Performance test methods for solar combistores

Contents

Page

Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Symbols and abbreviations 5

5 Store classification 5

6 Laboratory store testing 6
6.1 Requirements on the testing stand 6
6.1.1 General 6
6.1.2 Measuring data and measuring procedure 6
6.2 Installation of the store 6
6.2.1 Mounting 6
6.2.2 Connection 7
6.3 Test and evaluation procedures 7
6.3.1 General 7
6.3.2 Test sequences 8
6.3.3 Data processing of the test sequences 12

7 Test report 13
7.1 General 13
7.2 Description of the store 14
7.3 Test results 15
7.4 Parameters for the simulation 16

Annex A (normative) Store model benchmark tests 17

Annex B (normative) Verification of store test results 18

Annex C (normative) Benchmarks for the parameter identification 19

Annex D (informative) Requirements for the numerical store model 20

Annex E (informative) Determination of hot water comfort 21

Bibliography 22

Tables Table 1 -- Classification of combistores 6

Table 2 -- Flow rates and store inlet temperatures for Test CD 9

Table 3 -- Flow rates and store inlet temperatures for Test CI 10

Table 4 -- Flow rates and store inlet temperatures for Test DD 11

Table 5 -- Flow rates and store inlet temperatures for Test DI 11
