DIN EN 12828:2014-07 (E)

Heating systems in buildings - Design for water-based heating systems (includes Amendment A1:2014)

Contents

Page

Foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms, definitions and symbols 7
3.1 Terms and definitions 7
3.2 Symbols 10

4 System design requirements 13
4.1 Requirements for preliminary design information 13
4.2 Heat supply 14
4.2.1 General 14
4.2.2 Sizing 14
4.3 Heat distribution 15
4.3.1 General 15
4.3.2 Design criteria 15
4.4 Heat emission 17
4.4.1 General 17
4.4.2 Sizing 17
4.4.3 Positioning 18
4.4.4 Thermal environment 18
4.4.5 Surface temperatures 18
4.5 Controls 18
4.5.1 General 18
4.5.2 Classification 19
4.5.3 Central control 19
4.5.4 Zone control 20
4.5.5 Local control 20
4.5.6 Timing control 20
4.6 Safety arrangements 21
4.6.1 General 21
4.6.2 Equipment required for sealed systems 21
4.6.3 Equipment required for open vented systems 24
4.7 Operational requirements 25
4.7.1 General 25
4.7.2 Provision for monitoring operating conditions 26
4.7.3 Temperature controller 26
4.7.4 Pressure maintaining control device 26
4.7.5 Water level adjustment 26
4.8 Thermal insulation 26
4.8.1 General 26
4.8.2 Undesirable heat losses 27
4.8.3 Harmful effects of too high temperatures 28
4.8.4 Frost protection 28

5 Instructions for operation, maintenance and use 28

6 Installation and commissioning 28

Annex A (informative) Control system classification 29

A.1 Control system classification 29
A.1.1 General 29
A.1.2 Heating control system modes 29
A.1.3 Control system performance modes 29
A.1.4 Control system classification table 29
A.2 Examples of control system classification 30
A.2.1 Local manual control 30
A.2.2 Local manual control and central automatic control 31
A.2.3 Local automatic control and central automatic control 31
A.2.4 Local automatic control and automatic zone control 33
A.2.5 Local automatic control and central automatic control with optimisation 33

Annex B (informative) Thermal Environment 35

Annex C (informative) Thermal insulation 37

Annex D (informative) Guidance for dimensioning diaphragm expansion vessels and pressurisation systems (sealed systems) 40

D.1 General 40
D.2 Expansion vessel size calculation 41

Annex E (informative) Safety valves for heating systems 44

E.1 Classification 44
E.2 General requirements 44
E.2.1 General 44
E.2.2 Materials 44
E.2.3 Protection against maladjustments 44
E.2.4 Guidance of the moveable parts 44
E.2.5 Easing gear 44
E.2.6 Protection of sliding and rotating elements 45
E.2.7 Design of coil compression springs 45
E.2.8 Transport protections 45
E.2.9 Pipes, installation and body 45
E.2.10 Marking 45
E.3 Calculation of the relief capacity 47
E.4 Requirements for safety valves marked H 47
E.4.1 General 47
E.4.2 Body and spring cap design 47
E.4.3 Threads on the inlet and outlet 48
E.4.4 Connections 48
E.4.5 Calculation 48
E.4.6 Setting 48
E.5 Requirements for safety valves marked D/G/H 48
E.5.1 General 48
E.5.2 Body and spring cap design 49
E.5.3 Design of the valve disc 49
E.5.4 Protection of sliding and rotating elements as well as springs 49
E.5.5 Safety valve with back pressure compensation 49
E.5.6 Setting 49

Annex F (informative) A-deviations 53
