DIN EN 834:2017-02 (E)

Heat cost allocators for the determination of the consumption of room heating radiators - Appliances with electrical energy supply (includes Corrigendum :2015)

Contents

Page

Foreword 4

Introduction 5

1 Scope 5

2 Normative references 6

3 Terms and definitions 6

4 Functional principle and measurement methods 11

5 General specifications 12
5.1 Base condition 12
5.2 c-value 13
5.3 Rating factors 13
5.4 Calendar function 14

6 Requirements for heat cost allocators 15
6.1 Requirements concerning temperature stress 15
6.2 Storage temperature 15
6.3 Start of counting 15
6.4 Idle counting rate 15
6.5 Temperature sensors 15
6.6 Calculator/central processing unit 16
6.7 Auxiliary power supply 16
6.8 Overflow of the display 16
6.9 Display resolution 16
6.10 Functional check 16
6.11 Limits of relative display deviation 17
6.12 Ageing 17
6.13 Electrical, electrostatic and magnetic influences 17
6.14 Thermal impact on heat cost allocators operating in accordance with the single-sensor measurement method 17
6.15 Thermal impact on heat cost allocators operating in accordance with the two-sensor measurement method 17
6.16 Thermal impact on other devices or components 18
6.17 Impact on transmission systems 18
6.18 Sealing 18
6.19 Calendar function 18
6.20 Taking into account operating conditions 18

7 Requirements for use and installation 19
7.1 Temperature limits 19
7.2 Attachment of the sensors 19
7.3 Attachment position of the sensors 20
7.4 Connecting cable installation 20
7.5 Uniformity of heat cost allocators 20

8 Rating requirements 21
8.1 Rating factor KQ 21

8.2 Rating factor KC 21
8.3 Rating factor KT 21
8.4 Resulting rating factor K 21
8.5 c-value 21

9 Requirements for maintenance and reading 22
9.1 Visual reading 22
9.2 Close-range reading 22
9.3 Remote reading 22

10 Testing 22
10.1 General 22
10.2 Test documents 23
10.3 Test report 23
10.4 Test protocols 23

11 Test procedures 23
11.1 Construction test 23
11.2 Sealing test 23
11.3 Temperature durability test 23
11.4 Test for compliance with the limits of the relative display deviation 24
11.5 Ageing resistance test 24
11.6 Test of the start of counting at normal operation and also, for heat cost allocators with room temperature sensors, at operation with thermal impact 24
11.7 Test of the idle counting rate 25
11.8 Test of the counting rate in the case of thermal impact 25
11.9 Test for external influences 26
11.10 Test of c-values, procedure 26
11.11 Test of c-values, scope of testing 26
11.12 Test of rating factor KQ 26
11.13 Test of rating factor KC 27

12 Marking 27

Annex A (informative) Information and recommendations 28

A.1 General 28
A.2 Heating systems 28
A.3 Recommended field of application 28
A.4 Heat emission not controllable by the consumer 29
A.5 Additional corrections 29
A.6 Documentation of the relationship between the counting rate and the thermal output 30
