

DIN 4726:2017-10 (E)

Warm water surface heating systems and radiator connecting systems - Plastics piping systems and multilayer piping systems

Contents	Page
Foreword	4
1 Scope	5
2 Normative references	5
3 Terms and definitions.....	7
4 Requirements.....	7
4.1 General	7
4.2 Homogeneity.....	7
4.3 Bending radii	7
4.4 Oxygen permeability	7
4.4.1 Thermal stability of barrier materials	7
4.4.2 Barrier layer thickness.....	8
4.4.3 Oxygen permeability	8
4.5 Specificity.....	8
4.6 Water additives: Compatibility with plastics pipes according to this standard	8
5 Testing	9
5.1 General	9
5.2 Homogeneity.....	9
5.3 Bending radii	9
5.4 Oxygen permeability	9
5.4.1 Thermal stability of barrier materials	9
5.4.2 Barrier layer thickness.....	9
5.4.3 Oxygen permeability	9
5.5 Specificity.....	10
5.6 Water additives: Compatibility with plastics pipes according to this standard	10
6 Marking and information	10
6.1 Marking	10
6.2 Information	10
7 Supply and storage.....	10
Annex A (normative) Determining the barrier layer thickness	11
A.1 Specimen preparation	11
A.2 Alternative sample preparation.....	11
A.2.1 Embedding.....	11
A.2.2 Grinding and polishing.....	12
A.3 Determining the layer thicknesses.....	12
Annex B (normative) Determining the thermal stability of barrier layer materials using the change in failure strain after ageing in an oven	13
B.1 Information on the method.....	13
B.2 Apparatus	13
B.3 Specimen preparation	13
B.4 Procedure	14
Annex C (informative) Testing the compatibility of water additives with pipes according to this standard	16
Bibliography.....	17

Figures

Figure B.1 — ε_B results plotted as a function of the logarithm of time t 15

Figure B.2 — Relationship between curves in Figure B.1 established for the exposure temperatures at the 25 % threshold value of ε_B (horizontal line) 15

Tables

Table A.1 — Number of circular segments 11

Table B.1 — Specimen thickness..... 14
