European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 6

4 Symbols and abbreviations 11

5 Store classification 12

6 Laboratory store testing 12
6.1 Requirements on the testing stand 12
6.1.1 General 12
6.1.2 Measured quantities and measuring procedure 15
6.2 Installation of the store 16
6.2.1 Mounting 16
6.2.2 Connection 16
6.3 Test and evaluation procedures 16
6.3.1 General 16
6.3.2 Test sequences 18
6.3.3 Data processing of the test sequences 29

7 Store test combined with a system test according to ISO 9459-5 30

8 Store test according to EN 12897 31

9 Determination of store parameters by means of "up- and down-scaling" 31
9.1 General 31
9.2 Requirements 31
9.3 Determination of store parameters 32
9.3.1 Thermal capacity of store 32
9.3.2 Height of store 32
9.3.3 Determination of heat capacity rate 32
9.3.4 Relative heights of the connections and the temperature sensors 32
9.3.5 Heat exchangers 32
9.3.6 Parameter describing the degradation of thermal stratification during stand-by 32
9.3.7 Parameter describing the quality of thermal stratification during direct discharge 33

10 Test report 33
10.1 General 33
10.2 Description of the store 33
10.3 Test results 34
10.4 Parameters for the simulation 35

Annex A (normative) Store model benchmark tests 36

A.1 General 36

A.2 Temperature of the store during stand-by 36
A.3 Heat transfer from heat exchanger to store 36

Annex B (normative) Verification of store test results 38

B.1 General 38
B.2 Test sequences for verification of store test results 38
B.2.1 General 38
B.2.2 Verification sequences from measurements on a store testing stand 38
B.2.2.1 General 38
B.2.2.2 Stores of all groups 39
B.2.2.2.1 Connection of the storage device to the testing stand 39
B.2.2.2.2 Group 1 39
B.2.2.2.3 Group 2 40
B.2.2.2.4 Group 3 41
B.2.2.2.5 Group 4 42
B.2.2.3 Stores with auxiliary heat exchanger(s) 43
B.2.2.4 Stores with electrical auxiliary heating element(s) 44
B.2.3 Test sequences obtained during a whole system test according to ISO 9459-5 45
B.3 Verification procedure 45
B.3.1 General 45
B.3.2 Error in transferred energies 45
B.3.3 Error in transferred power 46

Annex C (normative) Benchmarks for the parameter identification 47

Annex D (informative) Requirements for the numerical store model 48

D.1 General 48
D.2 Assumptions 48
D.3 Calculation of energy balance 48

Annex E (informative) Determination of hot water comfort 50

Annex F (informative) Implementation for Ecodesign and Energy Labelling 51

F.1 Standing loss 51
F.2 Nominal store volume 51
F.3 Volume of the non-solar heat storage 51

Annex ZA (informative) Relationship between this European Standard and the energy labelling requirements of Commission Delegated Regulation (EC) No 811/2013 aimed to be covered 52

Annex ZB (informative) Relationship between this European Standard and the energy labelling requirements of Commission Delegated Regulation (EC) No 812/2013 aimed to be covered 53

Annex ZC (informative) Relationship between this European Standard and the ecodesign requirements of Commission Regulation (EC) No 814/2013 aimed to be covered 54
