

ISO 9060:2018 (E)

Solar energy — Specification and classification of instruments for measuring hemispherical solar and direct solar radiation

Contents

	Foreword
	Introduction
1	Scope
2	Normative references
3	Terms and definitions
4	Instruments to measure hemispherical solar radiation — Pyranometers
4.1	General physical design
4.2	Types
4.3	Classification
4.3.1	General
4.3.2	Pyranometer specifications
4.3.3	Classification criteria
4.3.4	Identification of classification
5	Instruments to measure direct solar radiation—Pyrheliometers
5.1	General physical design
5.2	Types
5.2.1	Absolute pyrheliometer
5.2.2	Compensation pyrheliometer
5.2.3	Pyrheliometers without self-calibration capability
5.3	Classification
5.3.1	General
5.3.2	Pyrheliometer specifications
5.3.3	Classification criteria
5.3.4	Identification of classification
6	Final remarks
Annex A	(informative) Comments on the specifications given in Tables 1 to 2
A.1	Response time
A.2	Zero off-set
A.3	Non-stability
A.4	Nonlinearity
A.5	Directional response (for beam radiation)
A.6	Tilt response
A.7	Spectral error
