

ISO 9060:2018 (E)

Solar energy — Specification and classification of instruments for measuring hemispherical solar and direct solar radiation

Contents

| | |
|---------|---|
| | Foreword |
| | Introduction |
| 1 | Scope |
| 2 | Normative references |
| 3 | Terms and definitions |
| 4 | Instruments to measure hemispherical solar radiation — Pyranometers |
| 4.1 | General physical design |
| 4.2 | Types |
| 4.3 | Classification |
| 4.3.1 | General |
| 4.3.2 | Pyranometer specifications |
| 4.3.3 | Classification criteria |
| 4.3.4 | Identification of classification |
| 5 | Instruments to measure direct solar radiation—Pyrheliometers |
| 5.1 | General physical design |
| 5.2 | Types |
| 5.2.1 | Absolute pyrheliometer |
| 5.2.2 | Compensation pyrheliometer |
| 5.2.3 | Pyrheliometers without self-calibration capability |
| 5.3 | Classification |
| 5.3.1 | General |
| 5.3.2 | Pyrheliometer specifications |
| 5.3.3 | Classification criteria |
| 5.3.4 | Identification of classification |
| 6 | Final remarks |
| Annex A | (informative) Comments on the specifications given in Tables 1 to 2 |
| A.1 | Response time |
| A.2 | Zero off-set |
| A.3 | Non-stability |
| A.4 | Nonlinearity |
| A.5 | Directional response (for beam radiation) |
| A.6 | Tilt response |
| A.7 | Spectral error |
