ISO 18566-6:2019 (E)

Building environment design — Design, test methods and control of hydronic radiant heating and cooling panel systems — Part 6: Input parameters for the energy calculation

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and subscripts

4.1 Symbols
4.2 Subscripts

5 Basic formula

6 Determination of input parameters for the energy efficiency of heating and cooling emission products

6.1 Heating and cooling systems with more than one covering layer above the pipes (Type 1)
6.2 Ceiling mounted water-based radiator system (Type 2)

Annex A (informative) Calculation example (Type 1)
