

DIN EN 14277:2006-11 (E)

Ventilation for buildings - Air terminal devices - Method for airflow measurement by calibrated sensors in or close to ATD/plenum boxes

Contents		Page
Foreword		3
1	Scope	4
2	Normative references	4
3	Terms, definitions and symbols	6
3.1	Terms and definitions	6
3.2	Symbols	8
4	Instrumentation	8
4.1	Air flow rate measurement	8
4.2	Pressure measurement	9
4.3	Temperature measurement	9
5	Sampling	10
5.1	General	10
5.2	Integral damper	10
6	Determination of the calibration curve	10
6.1	Principle	10
6.2	Test installation	10
6.3	Test procedure	12
7	Test to determine the effect of flow disturbance on measurement accuracy	13
7.1	Principle	13
7.2	Test procedure	14
8	Test report	23
8.1	Test results	23
8.2	Contents	23
Annex A (normative)	Zero-pressure difference method - Principle	26
