

DIN EN 15459:2008-06 (E)

Energy performance of buildings - Economic evaluation procedure for energy systems in buildings

Contents		Page
Foreword		4
Introduction		5
1	Scope	6
2	Normative references	6
3	Terms and definitions, symbols and units	7
3.1	Terms and definitions	7
3.2	Symbols and units	9
4	Organisation of the costs	10
5	Basic calculations	12
5.1	Interest rate, discount rate, present value factor and annuity factor	12
5.1.1	Real interest rate	12
5.1.2	Discount rate	12
5.1.3	Present value factor	12
5.1.4	Annuity factor	12
5.2	Global cost	12
5.2.1	Principles of the calculation	12
5.2.2	Calculation of the final value	13
5.3	Annuity calculation	16
5.3.1	General	16
5.3.2	Annuity calculation for unchanged components during the design payback period of the building	18
5.3.3	Annuity calculation for replaced components	18
5.3.4	Annuity calculation for running costs	19
5.3.5	Influence of price development for dynamic calculations	19
6	Principles of the method	19
6.1	General	19
6.2	STEP 1 - Financial data	20
6.2.1	Duration of the calculation	20
6.2.2	Financial rate	21
6.2.3	Human operation costs	21
6.2.4	Energy prices	21
6.3	STEP 2 - General information about the project	21
6.3.1	Identification of systems	21
6.3.2	Environment of the project	21
6.3.3	Meteorological and environmental data (not mandatory)	21
6.3.4	Constraints/opportunity related to energy	21
6.4	STEP 3 - Systems characteristics	22
6.4.1	Data collection	22
6.4.2	STEP 3.1 - Investment costs for systems related to energy	22
6.4.3	STEP 3.2 - Periodic costs for replacements	25
6.4.4	STEP 3.3 - Running costs except energy costs	25
6.5	STEP 4 - Energy costs	25
6.5.1	General	25
6.5.2	STEP 4.1 - Calculation of energy consumption	25

6.5.3	STEP 4.2 - Energy costs	26
6.6	STEP 5 - GLOBAL COST CALCULATION	26
6.6.1	Step 5.1 Calculation of replacement costs	26
6.6.2	Step 5.2 Calculation of final value	26
6.6.3	Step 5.3 Calculation of global cost	26
6.7	STEP 6 - ANNUITY COST CALCULATION	26
Annex A (informative) Economical data for energy systems		28
Annex B (informative) Systems description		32
Annex C (informative) Calculation sheet for global cost calculation		38
Annex D (informative) Annuity calculation, organisation of data and results		39
Annex E (informative) Example 1 - Dwelling 100 m ² with gas heating system		40
E.1	STEP 1 - Financial Data	40
E.2	STEP 2 - General information about project	40
E.2.1	Identification of systems	40
E.2.2	Environment of the project	40
E.2.3	Meteorological and environmental data (for information)	40
E.3	STEP 3 - System characteristics	41
E.3.1	STEP 3.1 - Investment costs for building construction and systems related to energy	41
E.3.2	STEP 3.2 - Periodic costs for replacements	42
E.3.3	Step 3.3 - Running costs except energy costs	44
E.4	STEP 4 - Energy costs	44
E.4.1	STEP 4.1 - Energy consumption	44
E.4.2	Step 4.2 - Energy costs	45
E.5	STEP 5 - Global costs	47
E.5.1	Step 5.1 and 5.2 - Calculation of replacement costs and final value	47
E.5.2	Step 5.3 - Global cost report	48
E.6	STEP 6 - Annuity calculation costs	49
