DIN EN 15377-3:2007-12 (E)

Heating systems in buildings - Design of embedded water based surface heating and cool ing systems - Part 3: Optimizing for use of renewable energy sources

Contents

Page

Foreword 3

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms, definitions and symbols 6
3.1 Data referred to the circuit: 7
3.2 Data referred to the room geometry and the boundary conditions: 7
3.3 Data referred to the slab and its partitions: 8
3.4 Data referred to the initial temperature profile 8
3.5 Calculation of the temperature profile and the heat fluxes in the generic time-step n 9

4 Relation to other EPBD standards 9

5 Optimisation of systems for facilitating the use of renewable energy sources 9

6 The concept of Thermo-Active-Building-Systems (TABS) 11

7 Calculation methods 16
7.1 General 16
7.2 Rough sizing method 16
7.3 Simplified sizing method using diagrams 16
7.4 Simplified model based on finite difference method (FDM) 23
7.4.1 Cooling system 23
7.4.2 Hydraulic circuit 23
7.4.3 Slab 23
7.4.4 Room 23
7.4.5 Limits of the method 25
7.5 Dynamic building simulations program 26

8 Input for computer simulations of energy performance 26

Annex A (informative) **Simplified diagrams** 27

Annex B (normative) **Calculation method** 31
B.1 Pipes level 31
B.2 Subdivision of the slab 31
B.3 Choice of the calculation time step: 35
B.4 Calculations for the generic n-th time step 35
B.5 Sizing of the system 38

Annex C (informative) **Tutorial guide for assessing the model** 39

Annex D (informative) **Computer program** 43

Bibliography 72
