

# DIN EN 15377-3:2007-12 (E)

## Heating systems in buildings - Design of embedded water based surface heating and cooling systems - Part 3: Optimizing for use of renewable energy sources

---

### Contents

Page

Foreword.....	3
Introduction .....	5
1 Scope .....	6
2 Normative references .....	6
3 Terms, definitions and symbols.....	6
3.1 Data referred to the circuit:.....	7
3.2 Data referred to the room geometry and the boundary conditions: .....	7
3.3 Data referred to the slab and its partitions: .....	8
3.4 Data referred to the initial temperature profile .....	8
3.5 Calculation of the temperature profile and the heat fluxes in the generic time-step n .....	9
4 Relation to other EPBD standards .....	9
5 Optimisation of systems for facilitating the use of renewable energy sources .....	9
6 The concept of Thermo-Active-Building-Systems (TABS) .....	11
7 Calculation methods .....	16
7.1 General.....	16
7.2 Rough sizing method .....	16
7.3 Simplified sizing method using diagrams.....	16
7.4 Simplified model based on finite difference method (FDM).....	23
7.4.1 Cooling system .....	23
7.4.2 Hydraulic circuit.....	23
7.4.3 Slab .....	23
7.4.4 Room.....	23
7.4.5 Limits of the method .....	25
7.5 Dynamic building simulations program .....	26
8 Input for computer simulations of energy performance .....	26
Annex A (informative) Simplified diagrams .....	27
Annex B (normative) Calculation method .....	31
B.1 Pipes level .....	31
B.2 Subdivision of the slab .....	31
B.3 Choice of the calculation time step: .....	35
B.4 Calculations for the generic n-th time step.....	35
B.5 Sizing of the system .....	38
Annex C (informative) Tutorial guide for assessing the model .....	39
Annex D (informative) Computer program.....	43
Bibliography .....	72
