

ISO/IEC TR 29181-7:2013-04 (E)

Information technology - Future Network - Problem statement and requirements - Part 7: Service composition

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Abbreviations and acronyms	2
5	Overview	3
6	Problem Statement	7
6.1	General problems	7
6.2	Scalability	10
6.3	Dynamics	11
6.4	Security	11
7	Requirements of service composition for the FN	11
7.1	General requirements	12
7.2	Specific requirements	13
Annex A (informative) Related standardization and research activities		18
A.1	IEEE P1903 (NGSON)	18
A.2	TMF Service Delivery Framework	19
A.3	ITU-T NGN SIDE	19
A.4	ATIS SON Forum	20
A.5	Related research activities	20
A.5.1	Service-Oriented Architecture (SOA) paradigm	23
A.5.2	Service Oriented Network Architecture (SONATE)	24
A.5.3	4WARD	25
A.5.4	Web Service Composition	27
A.5.5	Service Composition Approaches	28
Annex B (informative) Technical aspects of service composition in FN		34
B.1	A common protocol for supporting service composition	34
B.2	Service Composition approaches	34
B.3	Composing network functionality	35
B.4	Composition scope and service granularity	36
B.5	Place for composition	36
B.6	Composition execution epochs	37
B.7	An architecture based on services	37
B.7.1	Composition of transport and application services	39
B.7.2	Service identification	40
B.7.3	Service description	41
B.7.4	Service allocation	42

Annex C (informative) Functional Building Block of Service Composition in FN	43
C.1 Functional Components	43
C.1.1 Service Manager (SR)	43
C.1.2 Service Registration Manager (SRM)	44
C.1.3 Context Manager (CM)	44
C.1.4 Reference Points	45
Bibliography	46
