ISO/IEC TR 29181-8:2017-04 (E)

Information technology - Future Network - Problem statement and requirements - Part 8: Quality of Service

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Abbreviated terms 2

5 General 2
5.1 QoS in Future Network (FN) 2
5.2 Related works on QoS 3
5.2.2 European Telecommunication Standards Institute (ETSI) 3
5.2.3 Internet Engineering Task Force (IETF) 3
5.2.4 Internet 2 3
5.2.5 Telecommunication Standardization Sector of International Telecommunications Union (ITU-T) 4
5.3 Prospect of QoS architecture in FN 4

6 Problem statement of current networks for QoS 4
6.1 QoS in current networks 4
6.1.1 IPv4/IPv6 network 4
6.1.2 Next Generation Network (NGN) 5
6.1.3 WLAN 6
6.1.4 Wireless metropolitan area network (WMAN) 7
6.1.5 Mobile access networks 7
6.2 Summary of QoS problems in current networks 8
6.2.1 General 8
6.2.2 Lack of flexible mechanism supporting new applications 9
6.2.3 Lack of aggregate RSVP mechanism for business with same QoS requirements 9
6.2.4 Lack of network self-adaptability 10
6.2.5 Lack of connection-oriented characteristics 10
6.2.6 Lack of fundamental effectiveness 10
6.2.7 Lack of standards for QoS mechanism between heterogeneous networks 10
6.2.8 Lack of consideration from user perspective 10
6.2.9 Poor controllability 10
6.2.10 Human factors 10
6.2.11 Lack of effective congestion management 10

7 Requirements of FNQoS 11
7.1 Cross-layer and global 11
7.2 Customizable user service 11
7.3 Scalability and flexibility 11
7.4 Self-adjustment 11
7.5 Focusing on mobility 11
7.6 FNQoS service composition 11
7.7 Grade and classification of services 11
7.8 Quality of Experience 12

7.9 Quality of Protection 12
7.10 Connection-mode network service 12
7.11 FNQoS control technology 12
7.12 Effective congestion control mechanisms 12

Annex A (informative) Examples of technical issues for QoS realization in FN 13

Bibliography 14
