ISO/IEC 21122-1:2019 (E)

Information technology — JPEG XS low-latency lightweight image coding system — Part 1: Core coding system

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions, abbreviated terms and symbols

- 3.1 Terms and definitions
- 3.2 Abbreviated terms
- 3.3 Symbols

4 Conventions

- 4.1 Conformance language
- 4.2 Operators
- 4.2.1 Arithmetic operators
- 4.2.2 Logical operators
- 4.2.3 Relational operators
- 4.2.4 Precedence order of operators
- 4.2.5 Mathematical functions

5 Functional concepts

- 5.1 Sample grid, sampling and components
- 5.2 Wavelet decomposition
- 5.3 Codestream

6 Encoder requirements

7 Decoder

- 7.1 Decoding process general provisions
- 7.2 Decoder requirements

Annex A (normative) Codestream syntax

- A.1 General
- A.1.1 Marker segments and entropy coded data
- A.1.2 Key to syntax information
- A.2 Codestream syntax general provisions
- A.3 Markers and marker segments
- A.4 Syntax description of marker segments
- A.4.1 Start of codestream
- A.4.2 End of codestream
- A.4.3 Capabilities marker
- A.4.4 Picture header
- A.4.5 Component table
- A.4.6 Extension marker
- A.4.7 Weights table
- A.4.8 Slice header

Annex B (normative) Image data structures

- B.1 Dimensions of chroma subsampled image planes
- B.2 Division of the subsampled image plane into bands
- B.3 Band indices, horizontal and vertical decomposition levels

B.4 Division of the wavelet-transformed image into precincts
B.5 Division of precincts into lines
B.6 Grouping of lines and bands into packets
B.7 Division of precinct lines into code groups
B.8 Grouping of code groups into significance groups
B.9 Grouping of precincts into slices

Annex C (normative) Entropy decoding

C.1 Entropy decoding general provisions
C.2 Syntax of the precinct
C.3 Packet header
C.4 Packet body
C.5 Subpackets
C.5.1 Nomenclature
C.5.2 Significance subpacket
C.5.3 Bitplane count subpacket
C.5.4 Data subpacket
C.5.5 Sign subpacket
C.6 Bitplane count decoding
C.6.1 Bitplane count decoding general provisions
C.6.2 Computation of the truncation position
C.6.3 Computation of the vertical bitplane count predictor and truncation position predictor
C.6.4 Bitplane count decoding for the raw mode
C.6.5 Differential bitplane count decoding for vertical prediction
C.6.6 Variable length bitplane count decoding without prediction
C.7 Elementary variable length decoding primitives
C.7.1 Variable length decoding primitive
C.7.2 Variable length encoding primitive

Annex D (normative) Quantization

D.1 General
D.2 Inverse deadzone quantization
D.3 Inverse uniform quantization
D.4 Deadzone quantization
D.5 Uniform quantization
D.6 Bitplane count computation

Annex E (normative) Discrete wavelet transformation

E.1 General
E.2 Discrete inverse wavelet transformation
E.3 Coefficient reordering and scaling
E.4 Inverse horizontal filtering
E.5 Inverse vertical filtering
E.6 Symmetric extension
E.7 Inverse wavelet filtering with the 5-3 filter
E.8 Assignment of output coefficients
E.9 Discrete forwards wavelet transformations
E.10 Input coefficient assignment
E.11 Horizontal wavelet transformation
E.12 Vertical wavelet transformation
E.13 Forwards wavelet filtering with the 5-3 filter
E.14 Insertion of coefficients into precincts

Annex F (normative) Multiple component transformations

F.1 General
F.2 Inverse multiple component transformation
F.3 Inverse reversible multiple component transformation (inverse RCT)
F.4 Forward reversible multiple component transformation

Annex G (normative) DC level shifting and output clipping

G.1 General
G.2 Output scaling, DC level shifting and output clipping
G.3 Input DC level shift and scaling

Annex H (informative) Examples and guidelines

H.1 Example weights tables
