

ISO/IEC 30137-1:2019 (E)

Information technology — Use of biometrics in video surveillance systems — Part 1: System design and specification

Contents

	Foreword
	Introduction
1	Scope
2	Normative references
3	Terms and definitions
3.1	Target subject related terms
3.2	VSS related terms
3.3	Biometric system related terms
3.4	Environment/scenario related terms
3.5	Symbols and abbreviated terms
4	Comparison of terms used in biometric systems with those used in video surveillance
5	Architecture
6	Use cases
6.1	General
6.2	Post event use cases
6.3	Real time use cases
6.4	Enrolment use cases
7	Specification of hardware and software
7.1	General
7.2	Physical environment
7.3	Illumination environment
7.4	Inducing frontal view
7.5	Cameras and supporting infrastructure
7.5.1	Selection of cameras
7.5.2	Positioning of cameras
7.5.2.1	Camera positioning for use with AFR
7.5.2.2	Camera positioning to capture images for automated gait analysis
7.5.3	Infrastructure considerations
7.5.3.1	Power
7.5.3.2	Network requirements and compression
7.5.3.3	Storage and retention
7.6	Biometric software
7.6.1	General
7.6.2	Face detection software
7.6.3	Face comparison software
7.6.4	Algorithm selection and testing
7.6.5	Other (non-biometric) software
7.7	Computational requirements
7.7.1	General
7.7.2	Core biometric processes
7.7.3	Reducing computational expense
7.8	Specification for reference image database
7.8.1	General
7.8.2	Reference database size
7.8.3	Reference image quality

7.8.4	Reference database maintenance
8	Multiple camera operation
9	Interfaces to related software
10	Guidance for operator assistance
11	System design considerations
11.1	General
11.2	Establishing the business requirements
11.3	Site survey
11.4	Size and content of the watchlist
11.5	Performance requirements
11.5.1	General
11.5.2	Key metrics of performance
11.5.3	Presentation Attack Detection (PAD) performance metrics
11.6	Image data and metadata considerations
Annex A	(informative) Other related (but non-biometric) video analytic techniques and applications
A.1	General
A.2	Real time alerts
A.3	Video search for investigative purposes
A.4	Detection and segmentation
A.5	Tracking
A.6	Classification and identification of objects
A.7	Classification of activities and behaviours
A.8	Crowd analysis
Annex B	(informative) Societal considerations and governance processes
Annex C	(informative) Case study: The use of AFR with VSS for traveller triaging at the border
C.1	General
C.2	Subjects
C.3	Target subjects
C.4	Role of the biometric subsystem
C.5	Operator role
C.6	Performance objectives
Annex D	(informative) Video acquisition measurements
D.1	General
D.1.1	Resolution
D.2	Measurements
D.2.1	Exposure metering
D.2.2	Standard test chart setup
D.2.2.1	The ISO 12233 test chart
D.2.2.2	Grey scale, colour checking and IEC 61966-8 test charts
D.2.2.3	The IEC 1088/14 test panel
D.2.3	Measurement preparations and analysis
D.2.3.1	Preparations
D.3	Analysis
D.3.1	Camera image dynamic range checking
D.3.2	Lighting checking
