## Business requirements for end-to-end visibility of logistics flow

---

| <b>Contents</b>       |   | <b>Page</b> |
|-----------------------|---|-------------|
| Foreword .....        |   | iv          |
| Introduction .....    |   | v           |
| 1                     | Scope .....   | 1           |
| 2                     | Normative references .....  | 1           |
| 3                     | Terms and definitions .....   | 1           |
| 4                     | Abbreviated terms .....   | 2           |
| 5                     | Business requirements overview .....  | 2           |
| 6                     | Logistics information service system network architecture requirements .....        | 4           |
| 6.1                   | Network architecture requirements overview .....                                    | 4           |
| 6.2                   | LISS network entities .....   | 5           |
| 6.2.1                 | Logistics information service system (LISS) .....                                   | 5           |
| 6.2.2                 | Single window .....   | 6           |
| 6.2.3                 | Data providers .....  | 6           |
| 6.2.4                 | Data users .....  | 6           |
| 6.3                   | Network architecture requirement between different LISSs .....                      | 6           |
| 6.4                   | Network architecture requirement between LISS and SW/SSP .....                      | 6           |
| 6.5                   | Network architecture requirement between LISS and data providers .....              | 6           |
| 6.6                   | Network architecture requirement between LISS and data users from other LISSs ..... | 6           |
| 7                     | Visibility data interchange requirements between LISSs .....                        | 7           |
| 7.1                   | Event data classification .....   | 7           |
| 7.2                   | Data control for different entities in the LISS network .....                       | 8           |
| 8                     | Visibility data interface and process requirements for LISS network .....           | 8           |
| 8.1                   | Unified user management and authentication process requirements .....               | 8           |
| 8.1.1                 | Federation authentication among LISSs .....   | 8           |
| 8.1.2                 | Enable users log in to multiple LISSs and query services by single sign-on .....    | 8           |
| 8.2                   | Open data access .....  | 8           |
| 9                     | Guideline for business participants and stakeholders .....                          | 8           |
| 9.1                   | LISS operator .....   | 8           |
| 9.2                   | Single window operator .....  | 9           |
| 9.3                   | Data providers .....  | 9           |
| 9.4                   | Data users .....  | 9           |
| Annex A (informative) | Use cases and gap analysis .....  | 10          |
| Annex B (informative) | Related standards and organizations .....   | 17          |
| Bibliography .....    |   | 23          |
