

ISO/IEC 21823-2:2020-04 (E)

Internet of things (IoT) - Interoperability for IoT systems - Part 2: Transport interoperability

Contents	Page
FOREWORD.....	3
INTRODUCTION.....	4
1 Scope.....	5
2 Normative references	5
3 Terms and definitions	5
4 Network connectivity for transport interoperability.....	6
5 Overview	7
5.1 Network connectivity model and interfaces between IoT systems.....	7
5.2 Network connectivity model and interfaces within an IoT system.....	8
5.3 Network connectivity stack model	10
6 Requirements for network connectivity between IoT systems.....	12
6.1 Overview.....	12
6.2 Network interfaces between different IoT systems.....	13
6.2.1 Network service interface	13
6.2.2 Network protocol translation interface.....	13
6.2.3 Network resource interface	13
6.3 Requirements of network connectivity	13
6.3.1 General	13
6.3.2 Service-related requirement.....	13
6.3.3 Communication-related requirement	14
6.3.4 Network resource-related requirement	14
6.3.5 QoS requirement	14
6.3.6 Bandwidth requirement.....	15
6.3.7 Signalling requirement.....	15
6.3.8 Status monitor requirement.....	15
6.3.9 Security requirement	15
6.3.10 Time-dependent requirement.....	15
7 Requirements for network connectivity within an IoT system.....	15
7.1 Overview.....	15
7.2 Network elements for supporting network connectivity	16
7.2.1 Network service interface	16
7.2.2 Network protocol translation interface.....	17
7.2.3 Network resource interface	17
7.3 Gateways for supporting network connectivity.....	17
Bibliography.....	18
Figure 1 – Facets of IoT interoperability.....	6
Figure 2 – Network connectivity model between two IoT systems.....	7
Figure 3 – Network connectivity model within an IoT system.....	9
Figure 4 – Network connectivity stack model between IoT systems.....	10
Figure 5 – Network connectivity stack model within an IoT system.....	11
