ISO 2834-1:2020 (E)

Graphic technology — Laboratory preparation of test prints — Part 1: Paste inks

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Apparatus

4.1 Inking device
4.2 Printing form
4.2.1 IGT-type
4.2.1.1 Aluminium
4.2.1.2 Elastomer
4.2.1.3 Rubber blanket
4.2.2 prüfbau-type
4.2.2.1 Aluminium
4.2.2.2 Elastomer
4.2.2.3 Rubber blanket
4.2.3 Ink pipette
4.2.4 Top roller
4.2.5 Substrate carrier
4.3 Printability tester
4.3.1 IGT-type
4.3.1.1 Round-round printing principle
4.3.1.2 Round-on-flat printing principle
4.3.2 prüfbau-type
4.3.3 Homogeneity
4.4 Packing (IGT-type testers only)
4.4.1 Rubber packing
4.4.2 Paper packing
4.5 Additional materials and aiding devices
4.5.1 Cleaning aids
4.5.2 Solvents
4.5.3 Ruler
4.5.4 Timer
4.5.5 Analytical balance
4.5.6 Reference materials
4.6 Substrate
4.7 Inks

5 Principle

6 Preparation

6.1 Sampling
6.2 Conditioning
6.3 Sample preparation

7 Procedure

7.1 General
7.2 Preparation and instrument settings

7.2.1 Standard test settings
7.2.2 Settings for specific tests not covered by a test set
7.3 Inking of the printing form
7.4 Printing
7.4.1 Standard procedure
7.4.2 Procedure to reach the target ink coverage in g/m2
7.4.3 Procedure to reach the target optical density
7.5 Drying

8 Evaluation

8.1 Evaluation of the transferred ink coverage in g/m2
8.2 Optical characterization
8.2.1 Evaluation of optical density
8.2.2 Evaluation of colour

9 Report

Annex A (informative) Reference tests

A.1 Overview
A.2 Reference test
A.3 Reference ink

Annex B (normative) Breaking-in of elastomer rollers

B.1 General
B.2 Procedure

Annex C (normative) Maintaining elastomer rollers and other materials

C.1 General
C.2 Drying time curve
C.3 Life time
C.3.1 Solid elastomer printing forms
C.3.2 Rubber blanket printing forms
C.3.3 Packings and substrate carriers
C.3.4 Special printing forms
C.3.5 Top rollers
