

ISO/IEC 18032:2020 (E)

Information security — Prime number generation

Contents

	Foreword
1	Scope
2	Normative references
3	Terms and definitions
4	Symbols and abbreviated terms
5	Trial division
6	Probabilistic primality test
6.1	General
6.2	Requirements
6.3	Miller-Rabin primality test
7	Deterministic primality verification methods
7.1	General
7.2	Elliptic curve primality proving algorithm
7.2.1	General
7.2.2	Elliptic curve primality certificate generation
7.2.3	Elliptic curve primality certificate verification
7.3	Primality certificate based on The Shawe-Taylor algorithm
8	Prime number generation
8.1	General
8.2	Requirements
8.3	Using the Miller-Rabin primality test
8.3.1	General
8.3.2	Random search
8.3.3	Incremental search
8.3.4	Primes with an elliptic curve primality certificate
8.4	Using deterministic methods
8.4.1	General
8.4.2	The Shawe-Taylor algorithm
Annex A	(normative) Error probabilities
A.1	General
A.2	Worst-case error estimate for t Miller-Rabin primality tests
A.3	Average-case error estimates for t Miller-Rabin primality tests
Annex B	(normative) Generating primes with side conditions
B.1	General
B.2	Congruence restrictions on primes
B.2.1	General
B.2.2	Congruence restrictions and incremental or random search
B.2.3	Congruence restrictions and The Shawe-Taylor algorithm
B.2.4	Generating primes in an interval
Annex C	(normative) Additional random number generation methods
C.1	General
C.2	Simple conversion method
C.3	Simple discard method (reverse order)

C.4 Simple modular method (reverse order)

Annex D (normative) Auxiliary methods

- D.1 Sieving procedure**
- D.2 Primality tests based on Pocklington's theorem**
 - D.2.1 General**
 - D.2.2 Pocklington's primality test**
 - D.2.3 Partial Pocklington's primality test**
- D.3 Probabilistic Lucas primality test**
- D.4 Lucas' deterministic primality tests**
 - D.4.1 General**
 - D.4.2 Deterministic Lucas primality test**
 - D.4.3 The partial deterministic Lucas primality test**
- D.5 Brillhart-Lehmer-Selfridge primality test**
- 8.5 If test returns false, i.e. there does not exist a proper divisor d of N with $d \bmod \text{lcm}(F_1, F_2) = 1$, accept the certificate, return "N prime" and stop.**
- D.6 Elliptic curve primality test**
- D.7 Cornacchia's algorithm**
- D.8 Complex multiplication (CM) method**
- D.9 Testing for perfect squares**
 - D.9.1 General**
 - D.9.2 Probabilistic method**
 - D.9.3 Deterministic method**
- D.10 Jacobi symbol**
- D.11 Lucas symbol**
- D.12 Finding divisors in residue classes (Lenstra).**

Annex E (informative) Prime generation examples

- E.1 General**
- E.2 Miller-Rabin incremental search example**
- E.3 Miller-Rabin random search example**
