

ISO/TR 23249:2022-05 (E)

Blockchain and distributed ledger technologies - Overview of existing DLT systems for identity management

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Abbreviated terms	1
5	Existing taxonomies and conceptual architectures	3
5.1	General	3
5.2	NIST Taxonomic approach for blockchain IDMS	3
5.2.1	General	3
5.2.2	Authority model	3
5.2.3	Custody and delegation	4
5.2.4	Identifier origination schemes	5
5.2.5	Credential architectures	6
5.3	Functional role of DLT in identity systems	7
5.4	Trust Over IP Foundation	7
6	Existing DLT systems for identity management	7
6.1	General	7
6.2	uPort	7
6.3	Decentralized Identity Foundation (DIF)	9
6.4	Alastria ID	10
6.5	European Self Sovereign Identity Framework (ESSIF)	13
6.6	Sovrin™ Network, Hyperledger Indy, Hyperledger Aries and Hyperledger Ursa	15
6.7	WEF Known Traveller Digital Identity (KTDITM)	20
6.8	Weldentity	24
6.9	Masterchain	25
6.9.1	General	25
6.9.2	Actors in the system	27
6.10	LACChain	27
6.11	Decentralised digital architecture based on blind signatures	29
6.11.1	General	29
6.11.2	Actors in the system	30
6.11.3	Functions in the system	30
6.11.4	Flow of messages in the system	31
7	Existing relevant standards and frameworks	32
