

ISO/IEC TR 5891:2024-04 (E)

Information security, cybersecurity and privacy protection - Hardware monitoring technology for hardware security assessment

Contents		Page
Foreword.....		v
Introduction.....		vi
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Abbreviated terms	2
5	Relationship to existing standards	2
5.1	Standards of security assessment.....	2
5.2	Relationship to ISO/IEC 15408-3.....	3
5.3	Relationship to ISO/IEC TS 30104.....	3
6	Background	3
6.1	Complexity and security.....	3
6.2	Challenges in defining hardware security assessment techniques.....	3
7	Hardware monitoring technologies	4
7.1	Overview.....	4
7.2	Research in academic areas.....	4
7.3	Industrial cases.....	5
7.4	Purpose.....	6
7.4.1	Security.....	6
7.4.2	Debugging.....	7
7.4.3	Tuning performance.....	8
7.4.4	Fault tolerance and QoS.....	8
7.4.5	Physical specification measurement.....	9
7.4.6	Application-specific monitoring.....	10
7.5	Carrier type.....	10
7.5.1	Middleware.....	10
7.5.2	Software.....	11
7.5.3	Hardware-assisted monitors.....	13
7.5.4	Software vs. hardware-assisted solutions.....	16
7.6	Target entity.....	16
7.6.1	IP cores.....	16
7.6.2	Processing units.....	17
7.6.3	Memory.....	17
7.6.4	Peripheral devices.....	18
7.7	Objective patterns.....	18
7.7.1	Information content.....	18
7.7.2	Physical specification.....	18
7.7.3	Behaviours.....	18
7.8	Deployment method.....	19
7.8.1	General.....	19
7.8.2	Intrusiveness.....	19
7.8.3	Offline or online.....	19
7.8.4	Synchronous or asynchronous.....	19
7.8.5	Single or multiple monitors.....	19
7.8.6	Scalability.....	19
7.8.7	Resilience and redundancy.....	20
7.8.8	Compatibility.....	20

7.8.9	Impact on performance	20
7.8.10	Lawful and ethical data handling regulations and requirements	20
8	Utilizing monitoring technologies for hardware security assessment.....	20
8.1	Existing state-of-the-art security assessment approaches	20
8.2	How hardware monitoring can help	21
8.3	Challenges.....	22
9	Certification for monitoring hardware	24
	Bibliography.....	27
