# ISO/IEC TR 21890:2001-10 (E)

**Information technology_- Telecommunications and information exchange between systems_- Interoperation of PISNs with IP_networks**

## Contents

| | | |
|---|---|---|
| Foreword | | **vi** |
| Introduction | | **vii** |
| **1** | Scope | **1** |
| **2** | Normative references | **1** |
| **3** | Definitions | **3** |
| **3.1** | Corporate telecommunication Network (CN) | **3** |
| **3.2** | Internet | **3** |
| **3.3** | Intranet | **3** |
| **3.4** | Internet Protocol (IP) | **3** |
| **3.5** | IP network | **3** |
| **3.6** | Private Integrated Services Network (PISN) | **3** |
| **3.7** | Private Integrated services Network eXchange (PINX) | **3** |
| **3.8** | Switched Circuit Network (SCN) | **3** |
| **3.9** | Tunnelling | **3** |
| **4** | Acronyms | **3** |
| **5** | Introduction | **5** |
| **5.1** | Background | **5** |
| **5.2** | Types of network | **6** |
| **5.3** | Arrangements for interworking of SCNs and IP networks | **7** |
| **5.4** | Arrangements for interconnection of SCN components over IP networks | **8** |
| **6** | General principles of multimedia communication over an IP network | **8** |
| **6.1** | Architecture | **9** |
| **6.1.1** | Media processing and packetization (MPP) functional entity | **9** |
| **6.1.2** | Resource control (RC) functional entity | **9** |
| **6.1.3** | Session control (SC) functional entity | **10** |
| **6.1.4** | SC-redirect (SC-R), SC-proxy (SC-P) and RC-proxy (RC-P) functional entities | **10** |
| **6.1.5** | Admission control (AC) functional entities | **11** |
| **6.1.6** | Identity resolution (IR) functional entity | **11** |
| **6.1.7** | Registrar (RGR) and registrant (RGT) functional entities | **11** |
| **6.1.8** | Generic functional architecture (non-interworking) | **11** |
| **6.1.9** | Physical realizations of generic functional architecture for multimedia communication over an IP network (non-interworking) | **12** |
| **6.1.10** | Generic functional architecture for interworking with an SCN | **13** |
| **6.1.11** | Physical realizations of generic functional architecture for interworking with an SCN | **13** |
| **6.1.12** | Simple terminals | **15** |
| **6.2** | Naming and addressing | **16** |
| **6.3** | Security | **16** |
| **6.4** | Quality of service (QoS) | **17** |
| **6.5** | Mobility | **18** |
| **7** | Standards for multimedia communication over an IP network | **18** |
| **7.1** | Overview | **18** |
| **7.2** | The ITU-T H.323 family of recommendations | **19** |
| **7.2.1** | Functional architecture | **19** |
| **7.2.2** | Naming and addressing | **20** |
| **7.2.3** | Supplementary services | **20** |

**7.2.4** Security **21**
**7.2.5** Quality of service **22**
**7.2.6** Mobility **22**

**7.3** Other ITU-T standards **22**

**7.3.1** H.248 **22**
**7.3.2** BICC **23**

**7.4** IETF specifications for IP telephony **23**

**7.4.1** Functional architecture **23**
**7.4.2** Main protocols **24**
**7.4.3** Naming and addressing **24**
**7.4.4** Supplementary services **25**
**7.4.5** Security **25**
**7.4.6** Quality of service **26**
**7.4.7** Mobility **26**

**7.5** ETSI TIPHON specifications **26**
**7.6** Terminal specifications from TIA TR-41.3.4 **26**

**8** Interworking of PISNs and IP networks via a gateway **26**

**8.1** Architecture **27**
**8.2** Signalling **28**
**8.3** Naming and addressing **28**

**8.3.1** Naming and addressing in PISNs **28**
**8.3.2** Naming and addressing in IP networks **28**
**8.3.3** Naming and addressing interworking when H.323 used in the IP network **28**
**8.3.4** Naming and addressing interworking when SIP used in the IP network **29**

**8.4** Supplementary services **29**

**8.4.1** H.323 supplementary services **29**
**8.4.2** SIP supplementary services **29**

**8.5** Security **29**
**8.6** Quality of service **29**
**8.7** Mobility **29**
**8.8** Network management **29**
**8.9** Aspects requiring further study or standardization work **30**

**9** Interconnection of remote PISNs via an IP network **30**

**9.1** Classification of scenarios for the interconnection of PISNs **30**
**9.2** Solutions for the interconnection of remote PISNs via an IP network **31**
**9.3** Solution 1 – QSIG tunnelling over IP network transport layer protocol **32**

**9.3.1** Architecture **32**
**9.3.2** Aspects requiring further study or standardization work **33**

**9.4** Solution 2 – QSIG tunnelling over IP network session control protocol **33**

**9.4.1** Architecture **33**
**9.4.2** Aspects requiring further study or standardization work **34**

**9.5** Solution 3 – enhanced QSIG in the IP network **34**

**9.5.1** Architecture **34**
**9.5.2** Aspects requiring further study or standardization work **34**

**10** Connection of telephones to a PINX via an IP network **35**

**10.1** Architecture **35**

**10.2** Aspect requiring standardization work **37**

**11** Summary **37**

**Annexes**

**A -** Overview and status of H.323 **39**

**B -** Overview and status of SIP **42**

**C -** Overview of H.248 / MEGACO protocol **45**

**D -** Architecture for Signalling Transport over IP-networks (SIGTRAN) **46**
