ISO/IEC TR 20943-1:2003-08 (E)

Information technology - Procedures for achieving metadata registry (MDR) content consistency - Part 1: Data elements

Contents

Page

Foreword vii

Introduction viii

1 Scope 1
1.1 Background 1
1.2 Purpose 1
1.3 Scope 1
1.4 Registration approach -- data elements and value domains 1

2 Normative references 2

3 Terms and definitions 2

4 Data element abstraction 2
4.1 Abstraction types 3
4.2 Example of specialization/generalization 3
4.2.1 Example of sharing a value domain 4
4.3 Example of concatenation/decomposition 4
4.4 Example of aggregation 5

5 Data element registration 6

6 Bottom-up approach to data element registration 6
6.1 General procedures for registering a data element 7
6.1.1 Understanding the data element 7
6.1.2 Content research 7
6.1.3 Data element definition 8
6.1.4 Permissible values and value domain 8
6.1.5 Representation class 9
6.1.6 Names and identifiers 9
6.1.7 Other metadata attributes 9
6.1.8 Data element concept 10
6.1.9 Classification schemes 11
6.1.10 Registration and administrative status information 11
6.2 Example of International Standard with enumerated domain 12
6.2.1 Understanding the data element 12
6.2.2 Content research 12
6.2.3 Data element definition 13
6.2.4 Permissible values and value domain 13
6.2.5 Representation Class 13
6.2.6 Identification and naming the data element 13
6.2.7 Other metadata attributes 14
6.2.8 Data element concept 15
6.2.9 Classification 15
6.2.10 Registration and administrative status information 16
6.2.11 Other names and codes from ISO 3166 16
6.2.12 Summary of metadata attributes 16
6.3 Application system data element development examples 19
6.3.1 Understanding the data element 19
6.3.2 Content research 19

6.3.3 Data element definition 19
6.3.4 Permissible values and value domain 20
6.3.5 Representation Class 20
6.3.6 Identify and name the data element 20
6.3.7 Other metadata attributes 21
6.3.8 Data element concept 22
6.3.9 Classification 22
6.3.10 Registration and administrative status information 22
6.3.11 Related data elements 23
6.3.12 Summary of metadata attributes 23
6.4 Example of International Standard with non-enumerated domain 25
6.4.1 Understanding the data element 25
6.4.2 Content research 26
6.4.3 Data element definition 26
6.4.4 Permissible values and value domain 26
6.4.5 Representation Class 27
6.4.6 Identifying and naming the data element 27
6.4.7 Other metadata attributes 28
6.4.8 Data element concept 28
6.4.9 Classification 29
6.4.10 Registration and administrative status informaiton 30
6.4.11 Other data elements in ISO 6709 30
6.4.12 Summary of metadata attributes 30
6.5 Example of a standard data element that uses a standard non-enumerated domain 33
6.5.1 Understanding the data element 33
6.5.2 Content research 33
6.5.3 Data element definition 33
6.5.4 Permissible values and value domain 33
6.5.5 Representation Class 34
6.5.6 Identifying and naming the data element 34
6.5.7 Other metadata attributes 35
6.5.8 Data element concept 36
6.5.9 Classification 36
6.5.10 Registration and administrative status information 37
6.5.11 Related data elements 37
6.5.12 Summary of attributes 37
6.6 Classification of data elements 40
6.6.1 General procedures for registering a classification of data elements 40
6.6.2 Data elements in a document 41
6.6.3 Data elements in a standard 42
6.7 Linking of data elements 43

7 Example of top-down approach to data element registration 44
7.1 Classification and Context 45
7.2 Objects and properties of data element concepts 46
7.3 Professional organization identifier example 47
7.3.1 Data element concept, conceptual domain and value meanings 47
7.3.2 Define and identify data elements 47
7.3.3 Specify value domain and permissible values 48
7.3.4 Other data element attributes 48
7.3.5 Classify the data element 49
7.3.6 Registration and administrative status information 49
7.3.7 Summary of attributes 49
7.4 Language expert identifier example 49
7.4.1 Data element concept, conceptual domain and value meanings 49
7.4.2 Define and identify data elements 49
7.4.3 Specify value domain and permissible values 50
7.4.4 Other data element attributes 50
7.4.5 Classify the data element 51
7.4.6 Registration and administrative status information 51
7.4.7 Summary of attributes 51
7.5 Language skill type identifier example 51

7.5.1 Data element concept, conceptual domain and value meanings 51
7.5.2 Define and identify data elements 52
7.5.3 Specify value domain and permissible values 52
7.5.4 Other data element attributes 53
7.5.5 Classify the data element 53
7.5.6 Registration and administrative status information 53
7.5.7 Summary of attributes 53
7.6 Natural language identifier example 53
7.6.1 Data element concept, conceptual domain and value meanings 54
7.6.2 Define and identify data elements 54
7.6.3 Specify value domain and permissible values 54
7.6.4 Other data element attributes 55
7.6.5 Classify the data element 55
7.6.6 Registration and administrative status information 55
7.6.7 Summary of attributes 56
7.7 Skill level discriminator example 56
7.7.1 Data element concept, conceptual domain and value meanings 56
7.7.2 Define and identify data elements 56
7.7.3 Specify value domain and permissible values 57
7.7.4 Other data element attributes 57
7.7.5 Classify the data element 58
7.7.6 Registration and administrative status information 58
7.7.7 Summary of attributes 58
7.8 Example summary table of attributes 58

8 Example of complex data 58
8.1 Examples 58

Annex A (informative) Tables of data element attributes for examples 65

B.1 Data element definition 75
B.1.1 Rules for definitions 75
B.1.2 Guidelines for definitions 77
B.1.3 Data element definition syntax 80
B.1.4 Terms commonly used in definitions 81
B.2 Representational attributes 81
B.2.1 Permissible values 81
B.2.2 Value domain 82
B.2.3 Representation class 83
B.2.4 Data Element Example 84
B.3 Identifying and naming a data element 85
B.3.1 Name context 85
B.3.2 Establish a naming convention 86
B.3.3 Example of a naming convention 87
B.3.4 Formulating a data element name 87
B.4 Identification 88
B.4.1 Data element identifier 88
B.4.2 Versioning 89
B.5 Conceptual relationships 90
B.5.1 Data element concept 90
B.5.2 Conceptual domain 91
B.5.3 Value meanings 91
B.6 Classification 92
B.7 Quality review 93
B.7.1 Registration status 93
B.7.2 Administrative status 93

Annex D (informative) Example of complete associated metadata item descriptions using top-down approach to data element registration 98

D.1 Example data model 98
D.2 Presentation of Information 99

D.2.1 Format of Item identifier 99
D.3 Context 100
D.4 Object classes and properties 101
D.5 Data element concepts and conceptual domains 105
D.6 Value Meanings 112
D.7 Value Domains and Representation Classes 114
D.8 Permissible Values 118
D.9 Data elements 121
