European foreword	3
Introduction	4
1 Scope	5
2 Normative references	5
3 Terms and definitions	5
4 Health and safety	10
5 Principle of tensile testing	10
6 Testing requirements	10
6.1 Resources	10
6.1.1 Equipment/plant	10
6.1.2 Materials/reagents	11
6.1.3 Qualification of personnel	11
6.2 Test samples/test pieces	11
6.2.1 Shape and dimensions	11
6.2.2 Product types	12
6.2.3 Preparation of test pieces	12
6.3 Testing procedure	12
6.3.1 Determination of the cross-sectional area	12
6.3.2 Marking the original gauge length (L_0)	13
6.3.3 Method of gripping	13
6.3.4 Extensometer	13
6.3.5 Temperature of test	13
6.3.6 Speed of testing	13
6.3.7 Young's modulus of elasticity (E), selection of test method	15
6.4 Determination and expression of test results	16
6.4.1 Determination of Young's modulus of elasticity (E)	16
6.4.2 Determination of proof stress (R_p)	16
6.4.3 Determination of tensile strength (R_m)	17
6.4.4 Determination of percentage elongation after fracture (A or A_{L_0})	17
6.4.5 Determination of percentage reduction of area after fracture (Z)	17
7 Test report	18
Annex A (normative) Test pieces to be used for sheets and strips with thickness less than or equal to 8 mm	20
Annex B (normative) Non-machined test pieces to be used for bars, sections and wires with a diameter or thickness less than or equal to 8 mm	22
Annex C (normative) Machined test pieces to be used for bars, sections, plates and wires with diameter or thickness greater than 8 mm and for forgings and castings	23
Annex D (normative) Test pieces to be used for tubes	26
Bibliography	28
