

ISO 12384:2010-11 (E)

Aerospace - Requirements for digital equipment for measurements of aircraft electrical power characteristics

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Symbols	1
5	Measurement requirements for the aircraft electric power characteristics	3
5.1	General rules, measurement states and the admissible errors of the measurement results	3
5.1.1	General	3
5.1.2	Measurement states	3
5.1.3	Admissible errors of the measurement results	3
5.2	Measurement of constant frequency (CF) a.c. power system characteristics	4
5.2.1	Steady state characteristics	4
5.2.2	Transient characteristics	8
5.3	Measurement of variable frequency (VF) a.c. power system characteristics	8
5.4	Measurement of d.c. power system characteristics (28 V or 42 V system)	8
5.4.1	Steady state characteristics	8
5.4.2	Transient d.c. voltage	10
5.5	Measurement of current parameter	10
5.6	Measurement of power transfer characteristics	10
5.7	Measurement of voltage spike characteristics	10
5.8	Measurement of power factor	10
6	General requirements for the measuring equipment	11
6.1	Applicability	11
6.1.1	Efficiency	11
6.1.2	Operating environment	11
6.2	Performance and functions	11
6.2.1	Accuracy	11
6.2.2	Scope of the measuring equipment	11
6.2.3	Measurement resolution	11
6.2.4	Input impedance	11
6.2.5	Sampling frequency range	12
6.3	Electromagnetic compatibility	12
6.4	Human-machine interface project	12
6.5	The regulation of select measuring equipment	12
6.5.1	The measurement regulation of the data process software	12
6.5.2	Selecting requirement	12
