## Aerospace - Requirements for digital equipment for measurements of aircraft electrical power characteristics

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	1
4	Symbols .....	1
5	Measurement requirements for the aircraft electric power characteristics .....	3
5.1	General rules, measurement states and the admissible errors of the measurement results .....	3
5.1.1	General .....	3
5.1.2	Measurement states .....	3
5.1.3	Admissible errors of the measurement results .....	3
5.2	Measurement of constant frequency (CF) a.c. power system characteristics .....	4
5.2.1	Steady state characteristics .....	4
5.2.2	Transient characteristics .....	8
5.3	Measurement of variable frequency (VF) a.c. power system characteristics .....	8
5.4	Measurement of d.c. power system characteristics (28 V or 42 V system) .....	8
5.4.1	Steady state characteristics .....	8
5.4.2	Transient d.c. voltage .....	10
5.5	Measurement of current parameter .....	10
5.6	Measurement of power transfer characteristics .....	10
5.7	Measurement of voltage spike characteristics .....	10
5.8	Measurement of power factor .....	10
6	General requirements for the measuring equipment .....	11
6.1	Applicability .....	11
6.1.1	Efficiency .....	11
6.1.2	Operating environment .....	11
6.2	Performance and functions .....	11
6.2.1	Accuracy .....	11
6.2.2	Scope of the measuring equipment .....	11
6.2.3	Measurement resolution .....	11
6.2.4	Input impedance .....	11
6.2.5	Sampling frequency range .....	12
6.3	Electromagnetic compatibility .....	12
6.4	Human-machine interface project .....	12
6.5	The regulation of select measuring equipment .....	12
6.5.1	The measurement regulation of the data process software .....	12
6.5.2	Selecting requirement .....	12
