DIN EN 16603-32-11:2014-11 (E)

Space engineering - Modal survey assessment; English version EN 16603-32-11:2014

Contents

Page

Foreword 5

1 Scope 6

2 Normative references 7

3 Terms, definitions and abbreviated terms 8

3.1 Terms from other standards 8

3.2 Terms specific to the present standard 8

3.3 Abbreviated terms 22

3.4 Notation 23

4 General objectives and requirements 25

4.1 Modal survey test objectives 25

4.1.1 Overview 25

4.1.2 General 25

4.1.3 Verification of design frequency 25

4.1.4 Mathematical model validation 26

4.1.5 Troubleshooting vibration problems 26

4.1.6 Verification of design modifications 26

4.1.7 Failure detection 27

4.2 Modal survey test general requirements 27

4.2.1 Test set-up 27

4.2.2 Boundary conditions 28

4.2.3 Environmental conditions 28

4.2.4 Test facility certification 28

4.2.5 Safety 29

4.2.6 Test success criteria 29

5 Modal survey test procedures 31

5.1 General 31

5.2 Test planning 31

5.2.1 Test planning 31

5.2.2 Pre-test activities 33

5.2.3 Test activities 33
5.2.4 Post-test activities 34
5.3 Test set-up 34
5.3.1 Definition of the test set-up 34
5.3.2 Test boundary conditions 34
5.3.3 Test instrumentation 36
5.3.4 Excitation plan 37
5.3.5 Test hardware and software 38
5.4 Test performance 38
5.4.1 Test 38
5.4.2 Excitation system 38
5.4.3 Excitation signal 39
5.4.4 Linearity and structural integrity 40
5.4.5 Measurement errors 40
5.5 Modal identification methods 41
5.6 Modal parameter estimation methods 42
5.7 Test data 42
5.7.1 Quality checks 42
5.7.2 Generalized parameters 44
5.7.3 Effective masses 44
5.7.4 Data storage and delivery 45
5.8 Test-analysis correlation 46
5.8.1 Purpose 46
5.8.2 Criteria for mathematical model quality 47
6 Pre-test analysis 49
6.1 Purpose 49
6.2 Modal survey test FEM 49
6.2.1 Purpose 49
6.2.2 Reduction of the detailed FEM 50
6.3 Test analysis model (TAM) 52
6.3.1 Purpose 52
6.3.2 TAM accuracy 53
6.3.3 Measurement point plan (MPP) 53
6.3.4 Test predictions 54
6.3.5 Test fixture participation 54
6.4 Documentation 55
6.4.1 FEM documentation 55

6.4.2 TAM documentation 55

Annex A (informative) **Excitation signals 57**

A.1 Overview 57

A.2 Purpose and classification 57

A.3 Excitation methods 58

Annex B (informative) **Estimation methods for modal parameters 61**

B.1 Overview 61

B.2 Theoretical background and overview 61

B.3 Frequency domain methods 67

B.4 Time domain methods 71

Annex C (informative) **Modal test - mathematical model verification checklist 74**

Annex D (informative) **References 76**

Bibliography 77

Figures

Figure 5-1: Test planning activities 32

Figure 5-2: Comparison of mode indicator functions (MIF) according to Breitbach and Hunt 43

Figure 6-1: Modal survey pre-test analysis activities 50

Tables

Table 5-1: Test objectives and associated requirements for the test boundary conditions 35

Table 5-2: Most commonly used correlation techniques 46

Table 5-3: Test-analysis correlation quality criteria 48

Table 5-4: Reduced mathematical model quality criteria 48

Table 6-1: Advantages and disadvantages of model reduction techniques 52

Table B-1 : Overview and classification of commonly used modal parameter estimation methods 64

Table B-2 : Advantages and disadvantages of the time and frequency domain methods 65

Table B-3 : Advantages and disadvantages of single and multiple degree of freedom methods 66

Table B-4 : Other aspects of selecting a modal parameter estimation method 67

Table C-1 : Verification checklist for mathematical models supporting modal survey tests 75
