DIN EN 16602-70-26:2015-06 (E)

Space product assurance - Crimping of high-reliability electrical connections; English version EN 16602-70-26:2014

Content

page

Foreword 5

1 Scope 6

2 Normative references 8

3 Terms, definitions and abbreviated terms 9

3.1 Terms defined in other standards 9

3.2 Terms specific to the present standard 9

3.3 Abbreviated terms 10

4 Principles 11

5 Requirements 12

5.1 Preparatory conditions 12

5.1.1 Facilities 12

5.1.2 Tools and equipment 13

5.2 Crimping operations for specific interconnections 14

5.2.1 General 14

5.2.2 Material selection 15

5.2.3 Process review and documentation 15

5.2.4 Connector barrel and single wire crimping 16

5.2.5 Connector barrel and multiple wire crimping 16

5.2.6 Ferrule shield crimping 17

5.2.7 Lug and splice wire crimping 18

5.3 Requirements for new crimp configurations 19

5.3.1 General 19

5.3.2 Test procedure 19

5.3.3 Sealing and marking 20

5.4 Test methods 21

5.4.1 General 21

5.4.2 Voltage drop 21

5.4.3 Tensile strength 23
5.4.4 Metallography 26
5.5 Quality assurance 26
5.5.1 General 26
5.5.2 Personnel training and certification 27
5.5.3 Workmanship 29
5.5.4 Visual inspection 30
5.5.5 Shift performance inspection and test 31
5.5.6 Calibration of crimping tools 31
5.5.7 Records 32
5.5.8 Nonconformance 33
5.6 Document requirements 33
Annex A (informative) Crimp configurations and tools 34
Bibliography 40

Figures

Figure 1-1: Specific interconnections in this Standard 7
Figure 5-1: Example of a typical connector barrel and single wire crimping 16
Figure 5-2: Example of a typical connector barrel and multi-wire crimping 17
Figure 5-3: Example of a typical ferrule shield crimping 18
Figure 5-4: Examples of typical lug and splice wire crimping 19
Figure 5-5: Typical plots showing variation in crimp termination characteristics with increasing indentation depth 21
Figure 5-6: Measurement of voltage drop across a crimped termination 22
Figure 5-7: Quality control during crimping operation 28
Figure 5-8: Visible workmanship standards 29
Figure 5-9: Workmanship examples and crimp micro-sections 29

Figure A-1 : Confined irregular-octagon crimp (compactive) 35
Figure A-2 : Dimpled confined octagon crimp (compactive) 35
Figure A-3 : Regular-hexagon crimp (compactive) 35
Figure A-4 : Semicircular one- or two-indent crimp (dispersive) 35
Figure A-5 : Four-indent crimp (dispersive) 35
Figure A-6 : Typical test fixture for testing lug and splice crimps 39

Tables

Table 5-1: Equipment for verification process 14
Table 5-2: Voltage drop test requirements 23
Table 5-3: Required ultimate axial strength for compactive and dispersive crimped joints 25
Table A-1 : Guideline for selector setting - Four-indent crimp (dispersive) Single wire (Crimping tool 22520/2-01) 37
Table A-2 : Guideline for selector setting - Four-indent crimp (dispersive) -Two wires (Crimping tool 22520/2-01) 38
Table A-3 : Guideline for die selection (ferrule coaxial shield crimping) 38
