ISO 18257:2016-11 (E)

Space systems - Semiconductor integrated circuits for space applications - Design requirements

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Abbreviated terms 2

5 General requirements 2

6 Design process 3
6.1 Overview 3
6.2 Design input 5
6.3 Design phases and tasks 6
6.3.1 Architecture design 6
6.3.2 Logic design and circuit design 7
6.3.3 Layout design 8
6.4 Mask making, package and testing 10

7 Detailed requirements 10
7.1 Architectural design requirements 10
7.2 Logic design and circuit design requirements 10
7.3 Layout design requirements 11
7.4 Package design requirements 11
7.4.1 Package structure design requirements 11
7.4.2 Packaging technology design requirements 12
7.4.3 Packaging electrical simulation analysis requirements 12
7.4.4 Packaging thermal simulation analysis 12
7.5 Reliability design requirements 12
7.5.1 Overview 12
7.5.2 Reliability design requirements 13
7.5.3 Antistatic design requirements 13
7.5.4 Low-power design requirements 13
7.5.5 Parameter modification and design margin optimization requirements 14
7.5.6 Electromagnetic compatibility design requirements 14
7.5.7 Radiation-hardened design requirements 14
7.6 Testability design requirements 15

Annex A (normative) Datasheet 16

Annex B (informative) Guidance 17
