ISO 22772:2020 (E)

Space systems — Requirements of launch vehicle (LV) to electrical ground support equipment (EGSE) interfaces

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Abbreviated terms

5 Interface design principles

5.1 General
5.2 Design process
5.3 Design principles

6 Interface design requirements

6.1 General
6.2 Types of interface implementation
6.2.1 Bus interface
6.2.2 Digital I/O interface
6.2.3 Analog interface
6.2.4 AC/DC power supply interface
6.2.5 RF/electromagnetic interface
6.3 Interface connectors

7 Induced environment

7.1 General
7.2 Mechanical environment
7.2.1 Low frequency vibration
7.2.2 Random vibrations
7.2.3 Acoustic noise
7.2.4 Shock
7.3 Thermal environment
7.3.1 General
7.3.2 Thermal environment during pre-launch phase
7.3.3 Thermal environment during launch phase
7.4 Radio and electromagnetic environment
7.4.1 Launch-vehicle-generated
7.4.2 EGSE-generated
7.4.3 Launch-range-generated

8 Verification analysis and test

8.1 Verification analysis methods
8.2 Verification analysis implementation
8.2.1 Feasibility analysis
8.2.2 Simulation analysis
8.2.3 Verification
8.2.4 Launch preparation state evaluation

9 Interface documentation requirements

9.1 Interface requirements document
9.2 Interface control document

10 Interface inspection and operation at launch site

10.1 Documentation and confirmation
10.2 Interfaces inspection verification
10.3 Combined operations
10.4 Safety requirements
