

ISO 16615:2025-07 (E)

Space systems - Stable operation requirements for spacecraft attitude and orbit control system

Contents

Page

Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Stable operation general principles	2
4.1 General	2
4.2 Classification of stable operation levels	2
4.2.1 General	2
4.2.2 Continuous operational service	2
4.2.3 Degraded performance operation	3
4.2.4 Emergency transitional operation	3
4.3 Factors affecting stable operation	3
4.3.1 General	3
4.3.2 Anomalies from known sources	3
4.3.3 Anomalies from unknown sources	3
4.4 Capability building for stable operation	3
4.5 Ground-based optimization and operational maintenance	4
5 Data validity assessment requirements	4
5.1 Basic principles of data validity judgement	4
5.2 Data validity assessment process	5
5.2.1 General	5
5.2.2 Status flag assessment	5
5.2.3 Data validity range assessment	5
5.2.4 Data continuity assessment	5
5.2.5 Data dynamism assessment	5
5.2.6 Data consistency assessment	6
6 Anomaly detection requirements	6
6.1 Classification of anomaly levels	6
6.1.1 General	6
6.1.2 Component-level anomaly detection	6
6.1.3 System-level anomaly detection	6
6.2 Component-level anomaly detection	6
6.3 System-level anomaly detection	7
7 Software or hardware fault handling requirements	7
7.1 Fault classification	7
7.1.1 General	7
7.1.2 Software faults	7
7.1.3 Hardware faults	7
7.2 Software fault handling requirements	7
7.3 Hardware fault handling requirements	7
8 Safety boundary check requirements	8
8.1 Principles of safety boundary checks	8
8.2 Requirements for safety boundary checks of spacecraft structure or mechanism	8
8.3 Requirements for safety boundary checks of spacecraft energy	8
8.4 Requirements for safety boundary checks of spacecraft propellant	8

9	Requirements for emergency survival modes in the spacecraft's AOCS	9
9.1	Classification of emergency survival modes	9
9.1.1	General	9
9.1.2	Sun-oriented safety mode	9
9.1.3	Stop-control safety mode	9
9.2	Requirements for sun-oriented safety mode handling	9
9.3	Requirements for stop-control safety mode handling.....	9
10	Cybersecurity requirements for AOCS	10
10.1	General.....	10
10.2	Encryption of telemetry data	10
10.3	Access control for ground systems.....	10
10.4	Anomaly detection for cybersecurity breaches.....	10
10.5	Fault handling in the event of a cyber-attack.....	10
10.6	Regular security updates and testing.....	10
	Bibliography	11
