ISO 15864:2004-08 (E)

Space systems - General test methods for space craft, subsystems and units

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms, definitions and abbreviated terms 1
3.1 Terms and definitions 1
3.2 Abbreviated terms 2

4 General requirements 3
4.1 Testing philosophy 3
4.2 Tailoring of requirements 3
4.3 Development tests 3
4.4 Qualification tests 4
4.5 Acceptance tests 4
4.6 Proto-flight tests 4
4.7 Prelaunch validation tests 4
4.8 Retest 4
4.9 Test documentation 5
4.10 Tests facilities and other requirements 7

5 Spacecraft system tests 7
5.1 Test items and sequence 7
5.2 Test levels and duration 7

6 Subsystem/unit tests 7
6.1 Test items and sequence 7
6.2 Test levels and duration 7

7 Test requirements 12
7.1 General 12
7.2 Functional test 12
7.3 Electromagnetic compatibility (EMC) test 13
7.4 Magnetic field test 14
7.5 Antenna pattern test 14
7.6 Optical alignment measurement 15
7.7 Physical property measurement 15
7.8 Dynamic balance 16
7.9 Launcher/spacecraft interface test 17
7.10 Static load test 17
7.11 Acceleration test 18
7.12 Modal survey 19
7.13 Sinusoidal vibration test 20
7.14 Random vibration test 21
7.15 Acoustic test 22
7.16 Shock test 23
7.17 Thermal balance test 23
7.18 Thermal vacuum test 24
7.19 Thermal cycle test 26
7.20 Pressure test 26
7.21 Leakage test 28
7.22 Burn-in and wear-in test 28
7.23 Tracking and control system/spacecraft compatibility test 29
