## Reinforced and prestressed concrete components in nuclear facilities - Safety concept, actions, design and construction

---

<b>Contents</b>		<b>Page</b>
Foreword .....		4
1	Scope .....	5
2	Normative references .....	5
3	Terms, definitions and symbols .....	6
4	Materials .....	6
4.1	Concrete .....	6
4.1.1	General .....	6
4.1.2	Temperature dependence of characteristic values .....	7
4.1.3	Bound water content .....	7
4.1.4	Heat capacity .....	8
4.2	Reinforcing steel .....	9
4.3	Prestressing steel .....	9
5	Accidental actions .....	9
5.1	General .....	9
5.2	Internal actions .....	9
5.2.1	Differential pressure .....	9
5.2.2	Jet impingement forces .....	10
5.2.3	Temperature .....	10
5.2.4	Anchorage forces .....	11
5.2.5	Impact loads .....	11
5.3	External actions .....	11
5.3.1	Seismic design situation .....	11
5.3.2	Aircraft crash .....	12
5.3.3	Explosion pressure wave .....	13
5.3.4	Flooding .....	13
6	Safety concept .....	13
6.1	General .....	13
6.2	Actions .....	13
6.3	Combination rules .....	14
6.4	Partial factors and combination factors for actions .....	15
6.5	Ultimate limit state .....	15
6.6	Serviceability limit state .....	17
7	Procedures for structural analysis and verification .....	17
7.1	General .....	17
7.2	Linear-elastic analysis .....	17
7.3	Non-linear analysis .....	17
7.4	Dynamic behaviour of building elements .....	18
7.4.1	General .....	18
7.4.2	Building element stiffness .....	18
7.4.3	Masses .....	18
7.4.4	Damping of building elements .....	18
7.4.5	Soil and foundation .....	19
7.4.6	Simplified methods for individual building elements .....	19

8	Design recommendations .....	21
8.1	Design strength of reinforced concrete .....	21
8.2	Ultimate limit strain of reinforcing steel and concrete .....	21
8.3	Shear forces .....	21
8.4	Punching shear .....	22
8.4.1	General .....	22
8.4.2	Building elements without punching shear reinforcement .....	22
8.4.3	Building elements with punching shear reinforcement .....	24
8.4.4	Structural detailing .....	25
<b>Annex A (informative) Load assumptions due to blast waves from explosions for overall buildings and slender building elements .....</b>		<b>27</b>
A.1	General .....	27
A.2	Rectangular buildings .....	28
A.2.1	Directly loaded individual building elements .....	28
A.2.2	Overall structure, bracing building elements, foundation .....	28
A.3	Cylindrical and spherical buildings .....	28
A.4	Slender building elements .....	30
<b>Bibliography .....</b>		<b>31</b>
<b>Figures Figure 1 -- Bound water content at low water vapour partial pressure and at temperatures kept constant at progressive steps .....</b>		<b>8</b>
<b>Figure 2 -- Idealized differential pressure p as a function of time .....</b>		<b>10</b>
<b>Figure 3 -- Idealized jet impingement force as a function of time .....</b>		<b>10</b>
<b>Figure 4 -- Idealized form of an elastic ground response or floor response spectrum .....</b>		<b>12</b>
<b>Figure 5 -- Load/time function for an aircraft crash according to the RSK-Leitlinien .....</b>		<b>12</b>
<b>Figure 6 -- Load/time function of pressure waves caused by chemical reactions, as defined in the BMI-Richtlinie (p: overpressure acting on the building) .....</b>		<b>13</b>
<b>Figure 7 -- Dynamic load factor for a pressure wave caused by an explosion ( p : resulting overpressure) .....</b>		<b>20</b>
<b>Figure A.1 -- Idealized overpressure, p, as a function of time of blast pressure waves acting on buildings .....</b>		<b>27</b>
<b>Figure A.2 -- Pressure/time function of resulting overpressure <math>p = p_{vorn} - p_{rück}</math> for rectangular buildings .....</b>		<b>28</b>
<b>Figure A.3 -- Overpressure p on cylindrical and spherical buildings, as a function of time .....</b>		<b>29</b>
<b>Figure A.4 -- Overpressure distribution on the perimeter of cylindrical and spherical buildings .....</b>		<b>29</b>
<b>Tables Table 1 -- Symbols .....</b>		<b>6</b>
<b>Table 2 -- Reference values for the bound water content of dry (i.e. dried) hardened cement paste ...</b>		<b>8</b>
<b>Table 3 -- Reference values for partial factors and combination factors .....</b>		<b>15</b>
<b>Table 4 -- Partial factors for determining the design resistance at ultimate limit state (normal-weight concrete up to C50/60, high-ductility reinforcing steel) .....</b>		<b>16</b>
<b>Table 5 -- Damping of building elements, as a percentage of critical damping .....</b>		<b>19</b>
<b>Table 6 -- Maximum dynamic load factors .....</b>		<b>20</b>

**Table 7 -- Coefficients  $c_d$  for requirement categories A1, A2 and A3 .....22**  
**Table A.1 -- Pressure ordinates as a function of impact angle (  $p$  from Figure A.3) .....29**  
**Table A.2 -- Dynamic pressure  $q$  as a function of  $p_2$  .....30**
