Nanotechnologies - Health and safety practices in occupational settings relevant to nanotechnologies

Contents	Page
Foreword	vi
1. Introduction	1
2. Scope	2
Bibliography	2
3. Nanomaterials: description and manufacturing	3
3.1. Engineered nanomaterials	3
3.1.1. Carbon containing nanomaterials	3
3.1.2. Oxides	4
3.1.3. Metals	5
3.1.4. Quantum dots	5
3.1.5. Organic polymeric nanomaterials	5
3.1.6. Bio-inspired nanomaterials	6
3.2. Production processes	6
3.2.1. Typical production processes	6
3.2.2. Aerosol generation methods	7
3.2.3. Vapor deposition methods	7
3.2.4. Colloidal/self-assembly methods	7
3.2.5. Electrodeposition	7
3.2.6. Electro-spinning	7
3.2.7. Attrition methods	7
Bibliography	8
4. Hazard characterization	9
4.1. Health effects	9
4.1.1. Basic principles and uncertainties	10
4.1.2. Potential relevance of health effects information about incidental or naturally-occurring nanoparticles and nanofibers	10
4.1.3. Relationship between toxicity and surface area, surface chemistry, and particle number	11
4.1.4. Inflammatory response to nanoparticles	11
4.1.5. Animal and cell-culture studies	12
4.1.6. Observations from epidemiological studies involving fine and nanoscale particles	15
4.2. Physical hazards	15
4.2.1. Fire (exothermic events)	15
4.2.2. Safety considerations in manufacturing nanomaterials	16
Bibliography	16
5. Exposure assessment to nanomaterials	23
5.1. Introduction	23
5.2. Scientific framework for assessing exposure to nanomaterials	23
5.2.1. Routes of exposure	23
5.2.2. Metric for assessing exposure to airborne nanomaterials	24
5.3. Review of methods for characterizing exposure to nanoparticles	26
5.3.1. General	26
5.3.2. Mass concentration	28
5.3.3. Number concentration	29

5.3.4.	Surface area concentration	30
5.3.5.	Nanoparticle size distribution measurement	31
5.3.6.	Sample collection for material characterization	32
5.3.7.	Measurement of high length : width aspect ratio particles of nanomaterials	33
5.3.8.	Sampling strategy issues	34
5.4.	Dermal exposure assessment	35
5.4.1.	Sampling	35
5.4.2.	Sample characterization	36
5.5.	Dose (internal exposure) assessment	36
5.6.	Discussion	37
Bibliography		37
6.	Risk assessment in occupational settings	41
6.1.	Introduction and scope	41
6.2.	Risk assessment for nanomaterials	41
6.2.1.	Quantitative and qualitative risk assessment	42
6.2.2.	Hazard identification	42
6.2.3.	Exposure-response assessment	43
6.2.4.	Exposure assessment	45
6.2.5.	Risk characterization	45
6.3.	Conclusions	46
Bibliography		46
7.	Control methodologies	47
7.1.	Introduction	47
7.2.	Implication of risk assessment in regard to control methodologies	48
7.2.1.	Strategies for control	48
7.3.	Examination of control methodologies	50
7.3.1.	Exposure prevention	50
7.3.2.	Control strategies	51
7.3.3.	Eliminating the hazards through effective design	51
7.3.4.	Substitution of raw materials, products, processes and equipment	51
7.3.5.	Engineering control techniques	52
7.3.6.	Administrative means for the control of workplace exposures	59
7.3.7.	Evaluating the work environment	63
7.3.8.	Personal protective equipment (PPE)	64
7.4.	Health surveillance	69
7.5.	Product stewardship	70
Bibliography		70
Appendix 7.1. Assigned protection factors (APFs) for respirators (from USACHPPM 55-011-1106). A comparison of past and present APFs		76
Appendix 7.2. Advantages and disadvantages of different types of Air-Purifying Particulate Respirators - using information from the U. S. NIOSH Respirator Selection Logic. 59		77
Annex A. Symbols and abbreviated terms		77
