Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Specimen preparation 5

5 Preliminary precautions 6

6 Analysis procedure 7

7 Data reduction 9
7.1 General 9
7.2 Identification of peaks 9
7.3 Estimation of peak intensity 9
7.4 Calculation of k-ratios 10
7.5 Matrix effects 10
7.6 Use of reference materials 10
7.7 Standardless analysis 10
7.8 Uncertainty of results 11
7.9 Reporting of results 12

Annex A (informative) The assignment of spectral peaks to their elements 13

Annex B (informative) Peak identity/interferences 15

Annex C (informative) Factors affecting the uncertainty of a result 17

Annex D (informative) Analysis of elements with atomic number < 11 19

Annex E (informative) Example data from a reproducibility study within a laboratory and between laboratories 20
