

ISO 22309:2011-10 (E)

Microbeam analysis - Quantitative analysis using energy-dispersive spectrometry (EDS) for elements with an atomic number of 11 (Na) or above

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Specimen preparation	5
5	Preliminary precautions	6
6	Analysis procedure	7
7	Data reduction	9
7.1	General	9
7.2	Identification of peaks	9
7.3	Estimation of peak intensity	9
7.4	Calculation of k-ratios	10
7.5	Matrix effects	10
7.6	Use of reference materials	10
7.7	Standardless analysis	10
7.8	Uncertainty of results	11
7.9	Reporting of results	12
Annex A (informative)	The assignment of spectral peaks to their elements	13
Annex B (informative)	Peak identity/interferences	15
Annex C (informative)	Factors affecting the uncertainty of a result	17
Annex D (informative)	Analysis of elements with atomic number < 11	19
Annex E (informative)	Example data from a reproducibility study within a laboratory and between laboratories	20
