

DIN EN ISO 22825:2012-08 (E)

Non-destructive testing of welds - Ultrasonic testing - Testing of welds in austenitic steels and nickel-based alloys (ISO 22825:2012)

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	6
4	Information required prior to testing	6
4.1	Items to be defined by specification	6
4.2	Specific information required by the operator prior to testing	6
5	Personnel	7
6	Equipment	7
7	Range setting for compression waves	7
8	Sensitivity setting	8
8.1	General	8
8.2	Use of side-drilled holes	8
8.3	Use of other reference reflectors	9
9	Test procedure and ultrasonic techniques	9
9.1	Development of the test procedure	9
9.2	Content of the procedure	9
9.3	Selection of ultrasonic technique(s)	10
9.4	Optimization of technique and draft of procedure	11
9.5	Practical implications of the use of refracted compression waves	11
10	Classification and sizing of indications	12
11	Testing of welds	12
11.1	General	12
11.2	Surface condition and couplant fluid	12
11.3	Parent metal testing	12
11.4	Scanning	12
11.5	Evaluation of indications	13
12	Test report	13
12.1	General data	13
12.2	Information related to equipment	13
12.3	Information related to testing technique	13
12.4	Results of testing	14
Annex A (informative) Compression wave angle beam techniques		15
Annex B (informative) Stainless steel calibration blocks for range setting		21

Annex C (informative) Reference blocks for sensitivity setting	23
Bibliography	26
