Rubber - Guide to the calibration of test equipment

Contents		Page
Foreword		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Principles of calibration	2
5	Calibration systems	2
6	Traceability	2
7	Calibration intervals	2
8	Records	3
9	Guide to the expression of uncertainty	3
10	Conditioning	3
11	Procedures	3
12	Expression of results	4
13	Calibration records	4
14	Electrical measurements	4
14.1	Current	4
14.2	Voltage	5
14.3	Frequency and bandwidth	5
14.4	Resistance	5
14.5	Wattage	5
14.6	Chart recorders	5
15	Dimensional measurements	6
15.1	Length-measuring instruments	6
15.2	Linear dimensions	6
15.3	Profiles	6
15.4	Extension, compression, and deflection	6
15.5	Finish, roughness, and flatness	6
15.6	Sieves, mesh, and pore size	7
15.7	Area	7
15.8	Volume	7
15.9	Angle	7
15.10	Levelling	7
15.11	Centre of percussion	7
16	Fluids: flow, pressure, viscosity, and density measurements	7
16.1	Flow meters	7
16.2	Devices producing a specified flow rate	7

16.3	Air exchange rate	8
16.4	Pressure transducers	8
16.5	Manometers	8
16.6	Devices producing a specified pressure	8
16.7	Density	8
17	Optical measurements	8
17.1	Irradiance	8
17.2	Refractometers	8
17.3	Colour-measuring instruments	9
18	Temperature measurements	9
19	Chemical analysis and reference materials	9
19.1	Glassware	9
19.2	pH-meters	9
19.3	Reference materials	9
20	Relative-humidity measurements	9
21	Force measurements	10
21.1	Tensile-, flexural-, and compression-testing machines	10
21.2	Force transducers	10
21.3	Devices producing a specified force	10
21.4	Torque	10
21.5	Energy	10
21.6	Inertia	10
22	Mass measurements	10
22.1	Balances	10
22.2	Weights	11
23	Miscellaneous measurements	11
23.1	Timers, clocks, etc	11
23.2	Time intervals	11
23.3	Frequency and counters	11
23.4	Velocity	11
23.5	Tachometers	11
23.6	Rate of heating or cooling	12
24	Calibration schedules	12
	Annex A (informative) Calibration intervals	13
	Bibliography	15
