# ISO/TR 16197:2014-05 (E)

## Nanotechnologies - Compilation and description of toxicological screening methods for manufactured nanomaterials

## Contents

Page

Foreword ..... iv

Introduction ..... v

1 Scope ..... 1

2 Normative references ..... 1

3 Termsanddefinitions ..... 1

4 Symbols (and abbreviated terms) ..... 3

5 Background ..... 3
5.1 Role and relevance of toxicological screening for the safety evaluation of manufactured NMs ..... 3
5.2 Toxicological screening as part of tiered approaches to toxicological assessment of manufactured NMs ..... 4
5.3 Discussion of relevant dosing for toxicological screening ..... 5
5.4 Discussion of the relationship between this Technical Report and ISO/DTR 16196, Compilation and description of sample preparation and dosing methods for manufactured NMs ..... 6

Nanotechnologies -- Guidance on physico-chemical characterization of engineered nanoscale materials for toxicological assessment ..... 6
5.6 Review of other relevant international activities and published documents ..... 6

6 Methods for toxicological screening related to human health ..... 7
6.1 General ..... 7
6.2 Positive and negative controls for nanomaterial toxicity testing ..... 7
6.3 Relevant methods for in vitro toxicological screening of manufactured NMs ..... 8
6.4 Relevant methods for in vivo toxicological screening of manufactured NMs ..... 19

7 Methods for toxicological screening related to the environment ..... 20
7.1 Introduction ..... 20
7.2 Environmental fate and distribution ..... 20
7.3 Environmental degradation and transformation ..... 21
7.4 Environmental biopersistence and bioaccumulation ..... 21

Bibliography ..... 22
