ISO 16808:2014-08 (E)

Metallic materials - Sheet and strip - Determination of biaxial stress-strain curve by means of bulge test with o ptical measuring systems

Contents

Page

Foreword iv

1 Scope 1

2 Symbols and abbreviated terms 1

3 Principle 2

4 Test equipment 2

5 Optical measurement system 6

6 Test piece 6
6.1 General 6
6.2 Application of grid 6

7 Procedure 7

8 Evaluation methods for the determination of the curvature and strains at the pole 7

9 Calculation of biaxial stress-strain curves 8

10 Test report 9

Annex A (informative) International comparison of symbols used in the determination of the bulge test flow curve 11

Annex B (normative) Test procedure for a quality check of the optical measurement system 13

Annex C (informative) Computation of the curvature on the basis of a response surface 16

Annex D (informative) Determination of the equi-biaxial stress point of the yield locus and the hardening curve 18

Bibliography 26
