

DIN ISO 22309:2015-11 (E)

Microbeam analysis - Quantitative analysis using energy-dispersive spectrometry (EDS) for elements with an atomic number of 11 (Na) or above (ISO 22309:2011)

Contents		Page
National foreword		3
National Annex NA (informative) Bibliography		3
Introduction		4
1 Scope		5
2 Normative references		5
3 Terms and definitions		6
4 Specimen preparation		9
5 Preliminary precautions		10
6 Analysis procedure		11
7 Data reduction		13
7.1 General		13
7.2 Identification of peaks		13
7.3 Estimation of peak intensity		13
7.4 Calculation of k-ratios		14
7.5 Matrix effects		14
7.6 Use of reference materials		14
7.7 Standardless analysis		14
7.8 Uncertainty of results		15
7.9 Reporting of results		16
Annex A (informative) The assignment of spectral peaks to their elements		17
Annex B (informative) Peak identity/interferences		19
Annex C (informative) Factors affecting the uncertainty of a result		21
Annex D (informative) Analysis of elements with atomic number < 11		23
Annex E (informative) Example data from a reproducibility study within a laboratory and between laboratories		24
Bibliography		26
