

DIN 51457:2017-05 (E)

Testing of ceramic raw and basic materials - Direct determination of mass fractions of trace impurities in powders, granules and lumps of graphite by optical emission spectroscopy by inductively coupled plasma (ICP OES) and by electrothermal vaporization (ETV) under the action of a halogenated reaction gas (modifiers)

Contents	Page
Foreword	3
1 Scope	4
2 Normative references	4
3 Principle.....	4
4 Fundamentals	4
5 Apparatus	7
6 Reagents and auxiliary materials.....	8
7 Sampling and sample preparation	9
8 Initial preparation.....	9
9 Calibration.....	9
10 Procedure	10
11 Wavelengths, determination limits and working range	11
12 Calculation of results and evaluation.....	11
13 Expression of results	11
14 Precision of the method	11
15 Test report	11
Annex A (informative) Precision data	13
A.1 General	13
A.2 Precision data from interlaboratory test results determined for the graphite sample	14
Annex B (informativ) Wavelengths and determination limits	15
Annex C (informative) Possible interferences.....	17
C.1 General	17
C.2 Spectral interferences.....	17
C.2.1 Line interferences	17
C.2.2 Band interferences.....	17
C.2.3 Background influences.....	18
C.2.4 Line reversal, self-absorption	18
C.2.5 Unspecific radiation.....	18
C.3 Non-spectral interferences	18
C.3.1 Interference due to the physical characteristics of the sample.....	18
C.3.2 Interferences due to deposits	18
C.3.3 Interferences due to memory effects	18
C.3.4 Ionization interferences.....	19
C.3.5 Variations in electrical coupling efficiency.....	19
C.4 Conclusion	19

Annex D (informative) Application of the standard to organic samples.....	20
Annex E (informative) Information on determining the uncertainty of the mean value.....	21
Annex F (informative) Commercially available reference materials.....	22
Annex G (informative) Calibration using aqueous solutions	23
Bibliography	24
