ISO 12963:2017-04 (E)

Gas analysis - Comparison methods for the determination of the composition of gas mixtures based on one- and two-point calibration

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols 2

5 Abbreviated terms 2

6 Principle 3
6.1 General requirements 3
6.2 Calibration methods 4

7 Main procedure 4
7.1 Pre-requisites 4
7.2 Sequence of operations (overview) 4
7.3 Calibration and measurement designs 5
7.3.1 General 5
7.3.2 Single-point exact-match calibration (SPEM) 6
7.3.3 Single-point through origin calibration (SPO) 6
7.3.4 Two-point calibration with a blank (TPB) 7
7.3.5 Two-point calibration with bracketing (TPC) 7
7.3.6 Multipoint calibration (MPC) 8

8 Performance evaluation of the measuring system 8
8.1 General 8
8.2 Sources of performance evaluation data and alternative approach 11
8.2.1 Performance evaluation other than in-house 11
8.2.2 Alternative for performance evaluation 11

9 Quality assurance measures 11
9.1 Validation of the assumptions made 11
9.2 Drift/stability control of the measuring system 11

10 Report of results 12
10.1 Calibration gas certificates 12
10.2 Report of analysis 12

Annex A (normative) System-stability check required when using exact-match and bracketing designs 13

Annex B (normative)StatisticsandsensitivitycoefficientsusedinClause 7 15

Annex C (normative) Alternative approach to assessing the nonlinearity contribution 17

Annex D (informative) Worked-out example 19

Annex E (informative) Using the designs without preceding system performance evaluation 22

Bibliography 24
