DIN EN 10247:2017-09 (E)

Micrographic examination of the non-metallic inclusion content of steels using standard pictures

Contents

Page

European foreword 5

Introduction 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 7

4 Symbols and abbreviations 10

5 Principles 12

6 Brief practical guide 13
6.1 Basic rules for evaluation 13
6.2 Evaluation according to the default rating methods 14

7 Sampling 14
7.1 General 14
7.2 Degree of reduction 15
7.3 Size and location of test area 15
7.4 Number of specimens 15
7.5 Preparation of specimens 16

8 Test method 16
8.1 Magnification 16
8.2 Microscope settings for image analysis and manual analysis 16
8.3 Field of view 17
8.4 Definition of the pictures of the chart 17
8.4.1 Size and Shape 17
8.4.2 Parameters 17
8.4.3 Arrangement of the pictures 17
8.5 Procedure 18
8.5.1 General 18
8.5.2 Several inclusions of mixed sizes in one field 18
8.5.3 Scanning 18
8.5.4 Assessment and evaluation 19
8.5.5 Evaluation of different types of inclusions 19
8.5.6 Recording of results 19

9 Types of assessment 19
9.1 Worst inclusion method: method P 19
9.1.1 Principle 19
9.1.2 Evaluation of PL (worst length) 20
9.1.3 Evaluation of Pd (worst diameter) 20
9.1.4 Evaluation of Pa (worst area) 20
9.2 Worst field method: method M 20
9.2.1 Principle 20
9.2.2 Evaluation of Mn (rating according to number) 20
9.2.3 Evaluation of ML (rating according to length) 20

9.2.4 Evaluation of Md (rating according to diameter) 20
9.2.5 Evaluation of Ma (rating according to area) 21
9.3 Average field method: method K 21
9.3.1 Principle 21
9.3.2 Scanning of a specimen for average field assessment 21
9.3.3 Evaluation 21
9.3.4 Evaluation of Kn, KL for elongated and Kn, Kd for globular inclusions 21
9.3.5 Evaluation of Kn and Ka 22

10 Test report 22

Annex A (normative) Type of inclusions 34

Annex B (normative) Parameters and assessments to be used if not otherwise specified 37

Annex C (informative) Examples for inclusions of different types 38

Annex D (informative) Shape factor 42

Annex E (informative) Examples for magnification 43

Annex F (informative) Details of the eyepiece graticules 45

Annex G (normative) Manufacturing specifications of the eyepiece graticule 46

G.1 General 46
G.2 Narrow field microscopes 46
G.3 Broad field microscopes 48

Annex H (normative) Calculation basis for the pictures of the chart 50

Annex I (normative) Rules for classification 52

I.1 Definition of classes 52
I.2 Classification of length 52
I.3 Classification of width 52
I.4 Classification of diameter 52

Annex J (informative) Comparison of inclusion types in different standards 53

Annex K (informative) Worst inclusion assessment 54

Annex L (informative) Worst field assessment 58

L.1 General 58
L.2 Evaluation of Mn 58
L.3 Evaluation of Mn, ML and Md 58
L.4 Evaluation of Mn and Ma 58

Annex M (informative) Average field assessment 62

M.1 General 62
M.2 Evaluation of Kn, KL and Kd 62
M.3 Evaluation of Kn and Ka 62
M.4 Restricted assessment 62

Annex N (normative) Calculation basis for the assessment 74

N.1 Worst inclusion assessment 74
N.2 Worst field assessment 74
N.3 Average field 75

Annex O (informative) Edge Errors correction 77

O.1 General 77
O.2 Measurement 77
O.3 Large inclusions 77

Annex P (normative) Calculation of average values of parameters for one class 79

Annex Q (normative) Average values of parameters 80

Bibliography 81
