

DIN EN 10247:2017-09 (E)

Micrographic examination of the non-metallic inclusion content of steels using standard pictures

Contents		Page
European foreword		5
Introduction		6
1	Scope	7
2	Normative references	7
3	Terms and definitions	7
4	Symbols and abbreviations	10
5	Principles	12
6	Brief practical guide	13
6.1	Basic rules for evaluation	13
6.2	Evaluation according to the default rating methods	14
7	Sampling	14
7.1	General	14
7.2	Degree of reduction	15
7.3	Size and location of test area	15
7.4	Number of specimens	15
7.5	Preparation of specimens	16
8	Test method	16
8.1	Magnification	16
8.2	Microscope settings for image analysis and manual analysis	16
8.3	Field of view	17
8.4	Definition of the pictures of the chart	17
8.4.1	Size and Shape	17
8.4.2	Parameters	17
8.4.3	Arrangement of the pictures	17
8.5	Procedure	18
8.5.1	General	18
8.5.2	Several inclusions of mixed sizes in one field	18
8.5.3	Scanning	18
8.5.4	Assessment and evaluation	19
8.5.5	Evaluation of different types of inclusions	19
8.5.6	Recording of results	19
9	Types of assessment	19
9.1	Worst inclusion method: method P	19
9.1.1	Principle	19
9.1.2	Evaluation of PL (worst length)	20
9.1.3	Evaluation of Pd (worst diameter)	20
9.1.4	Evaluation of Pa (worst area)	20
9.2	Worst field method: method M	20
9.2.1	Principle	20
9.2.2	Evaluation of Mn (rating according to number)	20
9.2.3	Evaluation of ML (rating according to length)	20

9.2.4	Evaluation of Md (rating according to diameter)	20
9.2.5	Evaluation of Ma (rating according to area)	21
9.3	Average field method: method K	21
9.3.1	Principle	21
9.3.2	Scanning of a specimen for average field assessment	21
9.3.3	Evaluation	21
9.3.4	Evaluation of Kn, KL for elongated and Kn, Kd for globular inclusions	21
9.3.5	Evaluation of Kn and Ka	22
10	Test report	22
Annex A (normative) Type of inclusions		34
Annex B (normative) Parameters and assessments to be used if not otherwise specified		37
Annex C (informative) Examples for inclusions of different types		38
Annex D (informative) Shape factor		42
Annex E (informative) Examples for magnification		43
Annex F (informative) Details of the eyepiece graticules		45
Annex G (normative) Manufacturing specifications of the eyepiece graticule		46
G.1	General	46
G.2	Narrow field microscopes	46
G.3	Broad field microscopes	48
Annex H (normative) Calculation basis for the pictures of the chart		50
Annex I (normative) Rules for classification		52
I.1	Definition of classes	52
I.2	Classification of length	52
I.3	Classification of width	52
I.4	Classification of diameter	52
Annex J (informative) Comparison of inclusion types in different standards		53
Annex K (informative) Worst inclusion assessment		54
Annex L (informative) Worst field assessment		58
L.1	General	58
L.2	Evaluation of Mn	58
L.3	Evaluation of Mn, ML and Md	58
L.4	Evaluation of Mn and Ma	58
Annex M (informative) Average field assessment		62
M.1	General	62
M.2	Evaluation of Kn, KL and Kd	62
M.3	Evaluation of Kn and Ka	62
M.4	Restricted assessment	62
Annex N (normative) Calculation basis for the assessment		74
N.1	Worst inclusion assessment	74
N.2	Worst field assessment	74
N.3	Average field	75

Annex O (informative) Edge Errors correction	77
O.1 General	77
O.2 Measurement	77
O.3 Large inclusions	77
Annex P (normative) Calculation of average values of parameters for one class	79
Annex Q (normative) Average values of parameters	80
Bibliography	81
