

DIN 50994:2017-11 (E)

Measurement of coatings - Non-destructive measurement of the conductivity of metallic coatings

Contents	Page
Foreword	4
1 Scope	5
2 Normative references	5
3 Terms, definitions and symbols	5
3.1 Terms and definitions.....	5
3.2 Symbols	6
4 Principle of the measurement.....	7
5 Factors that influence the measurement uncertainty.....	9
5.1 Influence of the conductivity	9
5.2 Lift-off effect.....	10
5.3 Temperature influence	10
5.4 Geometry — Thickness of the coating or part (saturation thickness).....	10
5.5 Geometry — Edge influence.....	11
5.6 Geometry — Surface curvature	11
5.7 Surface roughness.....	11
5.8 Contact load of the probe.....	12
5.9 Inclination of the probe.....	12
5.10 External electromagnetic fields.....	12
6 Calibration and adjustment of the measuring instrument	12
6.1 General	12
6.2 Conductivity measurement standards	13
6.3 Adjustment method.....	13
7 Implementation of the measurement and data evaluation	13
7.1 General	13
7.2 Number of measurements and data evaluation	13
8 Uncertainty of the results	14
8.1 General	14
8.2 Uncertainty of the measuring instrument calibration	15
8.3 Stochastic errors.....	16
8.4 Uncertainties caused by factors that are summarized in Clause 5.....	16
8.5 Combined uncertainty, expanded uncertainty and end result.....	17
9 Test report.....	17
Annex A (informative) Penetration depth of the field — Saturation depth.....	18
Annex B (informative) Lift-off effect.....	23
Annex C (informative) Principles for determining the uncertainty of a measurement via the selected method of measurement according to ISO/IEC Guide 98-3	25
C.1 General	25
C.2 Type A	25
C.3 Type B	26

Annex D (informative) Basic performance requirements for conductivity measuring instruments based on the phase-sensitive eddy current method	27
D.1 Technical specification	27
D.2 Check/verification of the measuring instruments and probes after delivery, after repair and at regular time intervals during use	28
D.3 Check/verification of measuring instruments and probes on site.....	28
Annex E (informative) Examples for experimental estimation of factors that influence the measurement accuracy	29
E.1 General.....	29
E.2 Saturation thickness.....	29
E.3 Lift-off effect.....	30
E.4 Edge influence	31
E.5 Surface curvature	32
Annex F (informative) Table of the Student factor	34
Annex G (informative) Examples of the estimation of the uncertainty (see Clause 8).....	35
G.1 Sample to be measured	35
G.2 Required steps.....	35
Bibliography	38
