ISO 19007:2018 (E)

Nanotechnologies — In vitro MTS assay for measuring the cytotoxic effect of nanoparticles

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and abbreviated terms

5 Materials

5.1 Cell line
5.2 Assay
5.3 Controls

6 Apparatus

7 Nanoparticle test sample preparation

8 Preparations

8.1 General
8.2 Culture medium
8.3 Preparation of cell stock culture
8.4 Verify viable cell growth
8.5 Verification of plate reader uniformity
8.6 Control preparation
8.6.1 Control description
8.6.2 CdSO4 stock solution preparation (10mM)
8.6.3 Nanoparticle control suspension preparation
8.7 Precision pipetting

9 Characterization of nanoparticle impact on cell viability

9.1 General
9.2 Preparation of the cell plate
9.3 Prepare the nanoparticle dosing plate
9.4 Expose cells to nanoparticles in culture medium
9.5 Expose cells to MTS Assay
9.6 Measurement of formazan absorbance

10 Cell viability analysis

11 Interpertation of Assay Results

Annex A (informative) Potential cell lines and assays

Annex B (informative) Example: the MTS assay using the A549 cell line (EMPA-NIST protocol)

B.1 General
B.2 Experimental procedures
B.2.1 Basic procedure
B.2.2 Material
B.2.2.1 Cell line

B.2.2.2 Assay
B.2.2.3 Chemical media and sera
B.2.3 Apparatus
B.3 Preparations
B.3.1 General
B.3.2 Culture medium
B.3.2.1 Culture medium
B.3.2.2 Cell culture medium without serum
B.3.3 Preparation of cell stock culture
B.3.3.1 Cell thawing
B.3.3.2 Growth of cells[16]
B.3.3.3 Cell harvesting
B.3.3.4 Counting cells to determine cell health
B.4 Procedure
B.4.1 Cell seeding
B.4.2 Preparation of the working concentration of chemical positive control materials
B.4.3 Preparing the working concentrations of nanoparticle test samples
B.4.4 Treatment of a A549 cells with chemical positive control materials and nanoparticles
B.4.5 Measurement of cytotoxicity
B.4.6 Representative Cytotoxicity Dose-Response Curves

Annex C (informative) Example: MTS assay using the RAW 264.7 cell line (IANH protocol)

C.1 General
C.2 Experimental procedure
C.2.1 Basic procedure
C.2.1.1 General
C.2.1.2 Materials
C.2.1.2.1 Cell line
C.2.1.2.2 Assay
C.2.1.2.3 Chemicals media and sera
C.2.1.3 Apparatus
C.3 Preparations
C.3.1 General
C.3.2 Culture medium
C.3.3 Preparation of cell stock culture
C.3.3.1 Cell thawing method
C.3.3.2 Growth of cells[17]
C.3.3.3 Passaging or splitting cells
C.3.3.4 Preparing culture for experiments
C.3.3.5 Verify cell growth and viability
C.3.4 Results of the IANH growth rate and cell viability assessment
C.4 Assessment of nanoparticle cytotoxicity to RAW 264.7 cells
C.5 Effect of exposure to nanoparticles on RAW 264.7 cell viability
